

Rube Goldberg Conclusion

In a minimum one-page response, formulate a conclusion essay about your project, which follows the following format:

☞ An introduction paragraph about how you came up with your idea. ☞ Next, write a well-developed paragraph for each of the following bullet points:

- What do you see as the ☞ strength(s) of your device versus the ☞ weakness of your device?
- What were some unexpected struggles, accomplishments or surprises while working on your device; as well as, what were some ☺☹☹ reactions you received from those who saw your project? If repeated failures were experienced, what did these occurrences teach you & how would you apply this new knowledge outside of this project?
- Where did you acquire your supplies? What costs were involved & what materials proved to be sturdy and/or weak when applied to the task?

☞ Before you finish, compose a closing paragraph, which describes observations you made about energy in your device as well as what your future plans for this device would include.
