

Irvine Unified School District
High School No. 5 Project
Traffic Impact Analysis Report

DRAFT

Prepared by:

Revised October 29, 2013

Table of Contents

| | |
|--|-----|
| Executive Summary | 1 |
| 1. Introduction | 8 |
| 1.1 Background..... | 8 |
| 2. Analysis Methodology..... | 12 |
| 2.2 Intersection Analysis | 13 |
| 2.3 Traffic Count Data | 15 |
| 2.4 Forecast Traffic Volumes | 16 |
| 2.5 Traffic Analysis Performance Criteria..... | 16 |
| 3. Existing Conditions | 17 |
| 3.1 Roadway conditions..... | 17 |
| 3.2 Intersections..... | 19 |
| 4. Future Traffic Without the Proposed Project..... | 23 |
| 4.1 Projected Traffic and Level of Service (LOS) | 23 |
| 5. Proposed Project | 63 |
| 5.1 Project Description..... | 63 |
| 5.2 Trip Generation | 63 |
| 5.3 Trip Distribution | 63 |
| 6. Existing Conditions With Proposed Project | 65 |
| 7. Future Conditions With Proposed Project..... | 82 |
| 7.1 Projected Traffic and LOS..... | 82 |
| 8. Special Analyses..... | 138 |
| 8.1 Site Access Analysis | 138 |
| 8.2 Parking Analysis..... | 142 |
| 8.3 Pedestrian and Bicycle Circulation..... | 142 |
| 8.4 Stadium Traffic | 142 |
| 9. Congestion Management Program (CMP) Requirements..... | 176 |
| 10. Recommended Mitigation Measures..... | 178 |
| 11. Conclusion | 179 |
| APPENDIX | A |
| Traffic Count Data | B |
| Forecast Intersection Volumes..... | C |
| Forecast ADT Volumes..... | D |
| Project Trip Distribution Memo..... | E |
| Intersection Analysis Worksheets | F |

Executive Summary

The Irvine Unified School District plans to build a new high school facility on a 40.3-acre site on the southeast corner of Irvine Boulevard and the future "B" Street, east of Sand Canyon Avenue and Highway 133 and west of Alton Parkway. The project site is on a portion of the former Marine Corps Air Station El Toro (MCAS El Toro), in Planning Area 51, Orange County Great Park, of the City of Irvine General Plan.

The school is scheduled to open in the year 2016 with a capacity of 2,600 students. It will also include a performing arts center, a gymnasium, and a stadium with 2,940 seats. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium would likely host one varsity football game per week for about ten to twelve weeks per year.

High School No. 5 is expected to generate up to 4,446 vehicle trips on a typical weekday, with 1,092 trips (743 inbound and 349 outbound) during the AM peak hour and 338 trips (159 inbound and 179 outbound) during the PM peak hour. Varsity football games with attendance at stadium capacity are forecast to generate a total of 494 trips (351 inbound and 143 outbound) during the evening peak hour. The stadium is not expected to generate a significant number of trips during the AM peak hour.

As part of the Great Park Neighborhoods Project, the MCAS El Toro site will be developed into master-planned neighborhoods or "Districts" that include a variety of housing, shops, restaurants, workplaces, educational institutions, parks, trails and outdoor activities. In 2011, the Heritage Fields/Great Park Neighborhoods Project was approved (the "2011 Approved Project") to develop 4,712 residential housing units and over six million square feet of non-residential uses in the buildout condition. The 2011 Approved Project did not include a high school facility as part of its land use plan.

In 2012, a General Plan Amendment and Zone Change (the "2012 Modified Project") was prepared that included two development options with an increase in residential development units and a decrease in non-residential acreage compared to the 2011 Approved Project. The 2012 Modified Project Options 1 and 2 each include 9,318 residential dwelling units but propose a slightly different allocation of those units between neighborhood Districts 1N and 1S. In both the 2012 Modified Project Options 1 and 2, a 2,600-student high school is included in the buildout scenario.

For the purpose of this analysis, all future conditions are based on the roadway and traffic assumptions used in the environmental documents prepared for the Heritage Fields/Great Park Neighborhoods 2011 Approved Project and 2012 Modified Project Options 1 and 2.

A total of 52 intersections have been included in this analysis, including 23 existing intersections. Twenty additional intersections will be constructed as part of the Heritage Fields/Great Parks Neighborhood project, including five intersections that are planned to be constructed by the year 2035 but are not included in the 2017 analysis. Two intersections are part of a planned future Highway 133 interchange project at Trabuco Road, and seven intersections are site access driveways that will be constructed as part of the High School No. 5 project.

The following traffic conditions were analyzed:

Existing Conditions

- Year 2013 peak hour intersection and 24-hour segment counts

Existing Plus Project Conditions

- Year 2013, 2011 Approved Project
- Year 2013, 2012 Modified Project Option 1
- Year 2013, 2012 Modified Project Option 2

Interim Year 2017 Analysis

- Year 2017, 2011 Approved Project
- Year 2017, 2012 Modified Project Option 1
- Year 2017, 2012 Modified Project Option 2

Interim Year 2035 Analysis

- Year 2035, 2011 Approved Project
- Year 2035, 2012 Modified Project Option 1
- Year 2035, 2012 Modified Project Option 2

Post-2035 Analysis

- Post-2035, 2011 Approved Project
- Post-2035, 2012 Modified Project Option 1
- Post-2035, 2012 Modified Project Option 2

The analysis of future conditions began with use of the Irvine Traffic Analysis Model, Version 8.4-10 in order to maintain consistency with the analyses performed for the Heritage Fields Project 2012 GPA/ZC, of which this project was a part. In addition, in order to have an Interim Year analysis that corresponded with or occurred following the opening year of the High School project (consistent with City of Irvine guidelines) an annual growth factor was applied to the 2015, 2030, and Post-2030 traffic volumes to estimate traffic conditions for the 2017, 2035, and Post-2035 conditions. This annual growth value is equal to the calculated annual growth in baseline traffic volumes between the horizon years in ITAM 8.4-10. This approach allows the analysis to assume the same background and pending projects as the Heritage Fields Project 2012 GPA/ZC and also provide for a more conservative analysis in an interim year that occurs after project opening.

TRAFFIC IMPACT ANALYSIS SUMMARY

The traffic impacts of the 2011 Approved Project and 2012 Modified Project with Options 1 and 2 have been identified by analyzing the study area network based on existing traffic conditions, 2017, 2035 and Post-2035 future traffic conditions. For each scenario, traffic conditions without the project are compared to the with project conditions for the 2011 Approved Project and 2012 Modified Project with Options 1 and 2 to identify the potential traffic impacts of the proposed project.

Existing traffic conditions are based on 2013 traffic counts. Future traffic conditions are based on the turning movement volumes from the Heritage Fields 2011 Approved Project and 2012 Modified Project EIR traffic studies. Growth factors equivalent to an ambient growth rate of 1.5% per year were applied to the EIR traffic study volumes to derive turning movement volumes for the analysis years identified in this study.

Existing Conditions

The level of service operations under existing conditions within the study area are generally acceptable with the exception of one intersection. The intersection of Bake Parkway and I-5 NB Ramps (#367) operates at an unacceptable level of service in the existing 2013 condition. All study area roadway segments currently operate at acceptable levels of service.

Existing Plus Project Conditions

The results of the existing plus project analysis are summarized in detail in Section 6.0 of this report. Under the existing plus project conditions, all study area segments and intersections are calculated to operate at LOS D or better with the exception of one intersection. Sand Canyon Ave and I-5 Southbound Ramps (#305) would operate at LOS F during the PM peak hour as it does in the No Project condition. There are no project impacts under the year 2013 scenarios.

No project impacts were identified in this scenario.

Interim Year 2017 Analysis

The results of the Year 2017 plus project analysis are summarized in detail in Section 7.1.1 of this report. The school is proposed to have an opening year of 2016, so the Interim Year 2017 analysis would occur one year after project opening. All of the roadway segments are forecast to operate at acceptable levels of service. Although several intersections operate at acceptable levels of service, there are a few that operate at unacceptable levels of service which are shown below for each scenario. No significant impacts were identified in the Year 2017 with project scenarios.

Intersections that are forecast to operate at an unacceptable level of service in the year 2017 with the project (2011 Approved Project) include:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, PM

Intersections that are forecast to operate at an unacceptable level of service in the year 2017 with the project (2012 Modified Project, Option 1) include:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS F PM

Intersections that are forecast to operate at an unacceptable level of service in the year 2017 with the project (2012 Modified Project, Option 2) include:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS F PM

No project impacts were identified in this scenario.

Interim Year 2035 Analysis

The results of the Year 2035 plus project analysis are summarized in detail in Section 7.1.2 of this report. The interim year 2035 with project scenarios include five deficient roadway segments for all three scenarios:

- Irvine Boulevard: “LY Street to “Z” Street – LOS E
- Irvine Boulevard: “Z” Street to “B” St - LOS F
- Irvine Boulevard: “B” Street to “LQ” Street – LOS F
- Irvine Boulevard: “LQ” Street to Alton Parkway - LOS F
- Trabuco: SR-133 Fwy to “O” Street – LOS F

Intersections that are forecast to operate at an unacceptable level of service in the interim year 2035 with the project (2011 Approved Project) include:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM
- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E, AM “A-02” Street/”LQ” Street and Irvine Boulevard (#800) - LOS E, AM

This scenario has two project impacts at the intersections of SR-133 Northbound Ramps and Irvine Boulevard (#317) and “LQ” Street and Irvine Boulevard (#800).

Intersections that are forecast to operate at an unacceptable level of service in the interim year 2035 with the project (2012 Modified Project, Option 1) include:

- Sand Canyon Avenue and I-5 NB Ramps (#303) – LOS E, AM and LOS F, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM

Intersections that are forecast to operate at an unacceptable level of service in the interim year 2035 with the project (2012 Modified Project, Option 2) include:

- Sand Canyon Avenue and I-5 NB Ramps (#303) – LOS E, AM and LOS F, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM

Post-2035 Analysis

The results of the Post-2035 plus project analysis are summarized in detail in Section 7.1.3 of this report.

The deficient roadway segments in the Post-2035 with the project (2011 Approved Project) include:

- Sand Canyon Av: Portola Parkway to Irvine Boulevard - LOS E
- Sand Canyon Av: Trabuco Road to Marine Way - LOS E
- Portola Parkway: Jeffrey Road to Sand Canyon Avenue - LOS E
- Irvine Boulevard: “Z” Street to “B” Street - LOS E
- Irvine Boulevard: “B” Street to “LQ” Street – LOS E

- Irvine Boulevard: “LQ” Street to Alton Parkway - LOS F
- Trabuco Road: SR-133 Freeway to “O” Street – LOS F

The deficient intersections in the Post-2035 with the project (2011 Approved Project) include:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM
- Sand Canyon Avenue and Burt Road (#444) - LOS E, AM and PM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM
- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E, AM
- “A-02” Street/“LQ” Street and Irvine Boulevard (#800) - LOS E, AM

This scenario has two project impacts at the intersections of SR-133 Northbound Ramps and Irvine Boulevard (#317) and “LQ” Street and Irvine Boulevard (#800).

The deficient roadway segments in the Post-2035 with the project (2012 Modified Project, Options 1 and 2) include:

- Sand Canyon Av: Trabuco Road to Marine Way - LOS E
- Portola Pkwy: Jeffrey Road to Sand Canyon Avenue - LOS E
- Irvine Boulevard: “Z” Street to “B” Street - LOS E
- Irvine Boulevard: “B” Street to “LQ” Street – LOS E
- Irvine Boulevard: “LQ” Street to Alton Parkway - LOS F
- Trabuco Road: SR-133 Freeway to “O” Street – LOS F

The deficient intersections in the Post-2035 with the project (2012 Modified Project, Options 1 and 2) include:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, AM and PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM
- Sand Canyon Avenue and Burt Road (#444) - LOS E, AM and PM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM

SPECIAL ANALYSES

Site Access - The Irvine High School No. 5 site has seven unsignalized access driveways located along “B” Street and “LQ” Street. Three additional signalized intersections are proposed along Irvine Boulevard at “B” Street and “LQ” Street, and at the intersection of “B” Street and “LQ” Street. All access intersections are forecast to operate at an acceptable level of service during all analysis scenarios and both peak hour periods, with the exception of Driveway 6 on “LQ” Street (Intersection #6). This intersection is forecast to have an LOS E in the Year 2035 2011 Approved Project Scenario during the AM peak hour. The delay is caused by traffic coming out of the school parking lot, and can be mitigated by signalizing the intersection.

Signal Warrant Analysis - A signal warrant analysis was conducted at all unsignalized study intersections and access driveways per the Manual on Uniform Traffic Control Devices (MUTCD). Based on the forecast volumes, traffic signals are warranted at the intersection of “B” Street & Irvine Boulevard (#563) and at “A-02” Street/“LQ” Street & Irvine Boulevard (#800). Signals are not warranted based on peak hour volume at any access driveways in the Interim Year 2017. Driveway 6 should be reevaluated when the Great Park Neighborhoods development

proceeds to the south and this intersection is converted to have four approaches. Vehicle and pedestrian volumes for a four-legged intersection may warrant a traffic signal in a future year beyond 2017.

Sight Distance Analysis – Adequate sight distance should be provided for all access driveways and at the following intersections: “B” Street & Irvine Boulevard (#563), “A-02” Street/“LQ” Street & Irvine Boulevard (#800), and “B” Street & “LQ” Street (#798). The sight triangles for these locations will be identified in a subsequent design phase when construction level drawings of the project site and surrounding roadways are available.

Parking Analysis - Irvine High School No. 5 is proposing to provide 784 surface parking spaces per the most current site plan. Forecast peak period parking generation per the Institute of Transportation Engineers (ITE) Parking Generation Manual is 598 parking spaces. Based on the forecast parking generation and proposed parking supply, the proposed parking supply exceeds forecast peak period parking demand.

Pedestrian and Bicycle Circulation - The preliminary site plan for Irvine High School No. 5 shows landscaped pedestrian pathways throughout the school with connections to the various surface parking facilities. There are currently Class II bike lanes along Irvine Boulevard, Alton Parkway, and Sand Canyon Avenue. It is recommended that the school provide bicycle lockers or racks on site, as well as signage to increase awareness and safety of bicyclists and pedestrians.

Stadium Traffic - The Irvine Unified School District is proposing to build a 2,940-seat athletic stadium as part of the High School No. 5 campus. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium is not expected to generate a significant number of trips during the AM peak hour, so the PM peak hour is the only time period selected for analysis.

Since the ITE *Trip Generation* Manual does not have a stadium category listed, driveway counts at the Irvine Stadium were conducted to identify typical vehicle trips that enter and exit the stadium during a typical event. Varsity football games with attendance at stadium capacity are forecast to generate a total of 605 evening peak hour trips (430 inbound and 175 outbound). This value is based on driveway volumes observed at Irvine Stadium and ITE *Trip Generation* Manual rates for Heritage Park.

The daily traffic volume for a stadium spectator event at High School No. 5 is forecast to be 2,176 trips, which includes 1,088 inbound trips and 1,088 outbound trips throughout the day. Daily trip generation for a special event land use like a high school stadium is highly variable, and depends on a number of local factors including demographics, weather patterns, team performance, and other site-specific criteria. Two other sources were used to estimate the daily trip rate for the High School No. 5: 1) The San Diego Municipal Code Land Development Code Trip Generation Manual, and 2) the Estancia High School Stadium Traffic and Parking Impact Analysis.

Based on the PM peak hour analysis for the stadium, no project related impacts are forecast.

CONGESTION MANAGEMENT PLAN (CMP) REQUIREMENTS

Irvine Boulevard is designated as a CMP roadway within the traffic study area for Irvine High School No. 5. The intersections of Irvine Boulevard and the NB SR-133 Ramps and Irvine Boulevard and the SB SR-133 ramps are designated CMP intersections. No significant traffic impacts are anticipated to CMP intersections as a result of the proposed High School No. 5.

PROJECT IMPACTS AND RECOMMENDATIONS

Based on the analysis results and the proposed Irvine High School No. 5 impacts, the following mitigation measures are recommended to bring the impacted locations back to acceptable level of service or pre-project conditions. Table ES-1 shows the mitigation measures.

Table ES-1 Recommended Mitigation Measures

| # | Location | Improvement |
|---|--------------------------------------|--|
| Year 2035 - 2011 Approved Project | | |
| 317 | SR-133 NB Ramps and Irvine Boulevard | Reconfigure west leg of intersection to allow a third eastbound thru-lane. |
| 800 | "LQ" Street and Irvine Boulevard | Add northbound left-turn lane, resulting in dual-northbound left-turn lanes. |
| Post Year 2035 - 2011 Approved Project | | |
| 317 | SR-133 NB Ramps and Irvine Boulevard | Reconfigure west leg of intersection to allow a third eastbound thru-lane. |
| 800 | "LQ" Street and Irvine Boulevard | Add northbound left-turn lane, resulting in dual-northbound left-turn lanes. |

1. Introduction

The Irvine Unified School District plans to build a new high school facility on a 40.3-acre site on the southeast corner of Irvine Boulevard and the future “B” Street, east of Sand Canyon and Highway 133 and west of Alton Parkway. The project site is on a portion of the former Marine Corps Air Station El Toro (MCAS El Toro), in Planning Area 51, Orange County Great Park, of the City of Irvine General Plan. The school is scheduled to open in the year 2016 with a capacity of 2,600 students. It will also include a performing arts center, a gymnasium, and a stadium with 2,940 seats.

1.1 BACKGROUND

1.1.1 Great Park Neighborhoods Development

As part of the Great Park Neighborhoods Project, the MCAS El Toro site will be developed into master-planned neighborhoods or “Districts” that include a variety of housing, shops, restaurants, workplaces, educational institutions, parks, trails and outdoor activities. In 2011, the Heritage Fields/Great Park Neighborhoods Project was approved (the “2011 Approved Project”) to develop 4,712 residential dwelling units (2,741 single family detached and 1,971 multi-family units) and over six million square feet of non-residential uses in the buildout condition. The 2011 Approved Project did not include a high school facility as part of its land use plan.

In 2012, a General Plan Amendment and Zone Change (the “2012 Modified Project”) was prepared that included two development options with an increase in residential development units and a decrease in non-residential acreage compared to the 2011 Approved Project. The Project Area Districts as illustrated in Exhibit 2-2 of the Heritage Fields Project 2012 General Plan Amendment/Zone Change Traffic Study are provided in Figure 1. The 2012 Modified Project Options 1 and 2 each include 9,318 residential dwelling units (3,358 single family detached and 5,960 multi-family units) but propose a slightly different allocation of those units between neighborhood Districts 1N and 1S. In both the 2012 Modified Project Options 1 and 2, a 2,600-student high school is included in the buildout scenario.

The 2012 Modified Project Option 1 proposes the same level of single family detached and multi-family residential development as the 2011 Approved Project, with the following exceptions:

- In District 5, the community recreational and retail land uses proposed in the 2011 Approved Project are replaced with 1,194 single family detached residential units and 1,690 multi-family residential units.
- In District 6, the mortuary, golf, agriculture, educational institution and research and development land uses proposed in the 2011 Approved Project are replaced with 1,722 multi-family residential units along with multi-use land use.
- In District 7, the 840 single family detached residential units proposed in the 2011 Approved Project are replaced with 692 single family detached residential units and 148 multi-family residential units.

The 2012 Modified Project Option 2 proposes the same level of single family detached and multi-family residential development as the 2012 Modified Project Option 1, with the following exceptions:

- In District 1N, 258 additional multi-family residential units are proposed in place of retail land use in Option 2.
- In District 1S, the 429 multi-family residential units proposed in Option 1 are replaced with 171 multi-family residential units plus retail and multi-use land uses.

The levels of residential development proposed in the 2011 Approved Project and 2012 Modified Project Options 1 and 2 in the Year 2015 and Post-2035 conditions are summarized in Table 1.

Table 1 - Residential Development Summary (DUs)

| District | 2015 Conditions | | | Post-2035 Conditions | | |
|--------------------|---------------------|---------------------|---------------------|----------------------|-----------------------|-----------------------|
| | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 |

| Total MF | 1,971 | 2,548 | 2,548 | 1,971 | 5,960 | 5,960 |
| Total Units | 4,283 | 4,712 | 4,712 | 4,712 | 9,318 | 9,318 |

Source: Heritage Fields Project 2012 GPA/ZC Traffic Study Tables 2-1 and 2-2

AP – Approved Project; DU – dwelling units; MF – multi-family; MP – Modified Project; SFD – single family detached

Note: (1) Senior housing units not included in this table and in the trip distribution assumptions.

1.1.2 IUSD Boundaries

The potential attendance area for High School No. 5 is assumed to be bounded by Jeffrey Road to the west, the Interstate 5 (I-5) freeway to the south, City limits/Bake Parkway to the east and City limits/State Route 241 (SR-241) to the north. This area is currently part of the Northwood High School and Irvine High School attendance areas.

DESIGN DEVELOPMENT

2. Analysis Methodology

The traffic analysis conducted for the High School No. 5 project includes an assessment of traffic conditions at 52 study intersections for the following analysis timeframes:

- Existing: Year 2013
- Project Opening: Year 2017
- Interim: Year 2035
- Buildout: Post-2035

The project is scheduled for an opening year of 2016. The Interim Year 2017 analysis is presumed to occur after the project is complete and the school has been operating for approximately one year. The intersection analysis methodology and performance criteria used in this analysis conform to the City of Irvine Traffic Impact Analysis Guidelines adopted August 24, 2004.

2.1.1 Analysis Scenarios

The traffic analysis for the High School No. 5 project will include the following scenarios:

- No Project - 2011 Approved Project
- No Project - 2012 Modified Project Option 1
- No Project - 2012 Modified Project Option 2
- With Project - 2011 Approved Project
- With Project - 2012 Modified Project Option 1
- With Project - 2012 Modified Project Option 2

An AM and PM peak hour analysis of each scenario will be made for the following timeframes:

- Existing Condition (Year 2013)
- Interim (Year 2017)
- Interim (Year 2035)
- Buildout (Post-2035)

2.1.2 Analysis Study Area Intersections

Study intersections include:

1. "B" Street & Driveway 1
2. "B" Street & Driveway 2
3. Driveway 3 & "LQ" Street
4. Driveway 4 & "LQ" Street
5. "LQ" Street & Driveway 5
6. "LQ" Street & Driveway 6
7. "LQ" Street & Driveway 7
8. Jeffrey Road & Portola Parkway
9. Jeffrey Road & Irvine Boulevard
10. Jeffrey Road & Bryan Avenue
11. Jeffrey Road & Trabuco Road
12. Sand Canyon Avenue & Portola Parkway

13. Sand Canyon Avenue & Irvine Boulevard
14. Sand Canyon Avenue & Trabuco Road
15. Sand Canyon Avenue & I-5 Northbound Ramps
16. Sand Canyon Avenue & Marine Way
17. Sand Canyon Avenue & I-5 Southbound Ramps
18. Sand Canyon Avenue & Burt Road
19. Sand Canyon Avenue & Oak Canyon Road
20. SR-133 Southbound Ramps & Irvine Boulevard
21. SR-133 Northbound Ramps & Irvine Boulevard
22. Alton Parkway & Irvine Boulevard
23. Alton Parkway & Toledo Way
24. Alton Parkway & Jeronimo Road
25. Alton Parkway & Barranca Parkway
26. Bake Parkway & I-5 Northbound Ramps
27. Bake Parkway & I-5/I-405 Southbound Ramps
28. SR-133 Southbound Ramps & Trabuco Road
29. SR-133 Northbound Ramps & Trabuco Road
30. Ridge Valley & Portola Parkway
31. "O" Street & "C" Street
32. Ridge Valley/"O" Street & Irvine Boulevard
33. "O" Street & Trabuco Road
34. "O" Street & Marine Way
35. "B" Street & Irvine Boulevard
36. Marine Way & Barranca Parkway
37. Marine Way & Alton Parkway
38. Bake Parkway & Marine Way
39. Portola Springs & Portola Parkway
40. Modjeska/"A" Street & Irvine Boulevard
41. "O" Street & "LN" Street
42. "O" Street & "LQ" Street
43. "O" Street & "LV" Street
44. "LY" Street & "LQ" Street
45. "LY" Street & Irvine Boulevard
46. "LY" Street & Trabuco Road
47. "A" Street & "LQ" Street
48. "Z" Street & "LQ" Street
49. "Z" Street & Irvine Boulevard
50. "B" Street & "LQ" Street
51. "B" Street & Marine Way
52. "A-02" Street/"LQ" Street & Irvine Boulevard

2.2 INTERSECTION ANALYSIS

Study intersection future forecast traffic conditions are analyzed using the Intersection Capacity Utilization (ICU) methodology adopted in the Orange County Congestion Management Program¹ (CMP). The ICU methodology is based on intersection volume-to-capacity (V/C) ratios. The ICU value for each movement is the observed or forecast volume divided by the saturation flow volume. The intersection ICU value is the sum of the ICU values for the critical movement on

¹ 1999 Orange County Congestion Management Plan (CMP), OCTA

each leg, where the critical movement is the one (left, through, or right) that has the highest ICU value. ICU values are usually expressed as a decimal percent (e.g. 0.74), where 1.00 represents the saturated condition where the volume of traffic flow is equal to the capacity.

The methodology also incorporates a check for right-turn capacity utilization. Right-turn-on-green and right-turn-on-red capacity availability is calculated and checked against the total right-turn capacity need. If insufficient capacity is available, then an adjustment is made to the total capacity utilization value. This calculation utilizes a right-turn-on-red (RTOR) factor², which reflects a lower saturation flow rate for these turning movements. The RTOR factor is not used for dedicated right turns, due to the absence of conflicting movements that would reduce capacity.

The efficiency of traffic operations is measured in terms of Level of Service (LOS). The LOS refers to the quality of traffic flow along roadways and at intersections. Evaluation of roadways and intersections involves the assignment of grades from "A" to "F," with LOS "A" representing the highest level operating conditions and LOS "F" representing extremely congested and restricted operations. Each letter grade corresponds to a range of V/C values, which are described in Table 3-1.

Intersection Level of Service analysis is performed using TRAFFIX software. TRAFFIX is a network-based interactive computer program that enables calculation of levels of service at signalized and unsignalized intersections for multiple locations and scenarios. TRAFFIX also calculates signal timing (green times and cycle lengths) and maximum queue lengths to assist in evaluating signalized intersections.

Table 2-1 Level of Service Description

| Level of Service | ICU Value | Definition |
|------------------|-------------|---|
| A | 0.00 – 0.60 | At level of service A there are no cycles that are fully loaded, and few are even close to loaded. No approach phase is utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turning movements are easily made, and nearly all drivers find freedom of operation. |
| B | 0.61 – 0.70 | Level of service B represents stable operation. An occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel somewhat restricted within platoons of vehicles. |
| C | 0.71 – 0.80 | In level of service C stable operation continues. Full signal cycle loading is still intermittent, but more frequent. Occasionally drivers may have to wait through more than one red signal indication, and back-ups may develop behind turning vehicles. |
| D | 0.81 – 0.90 | Level of service D encompasses a zone of increasing restriction, approaching instability. Delay to approaching vehicles may be substantial during short peaks within the peak period, but enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive back-ups. |

² City of Irvine, Planning Area 27 Tentative Tract Map Traffic Study, Appendix B – Intersection Capacity Utilization Worksheets

| Level of Service | ICU Value | Definition |
|------------------|-------------|---|
| E | 0.91 – 1.00 | Level of service E represents the most vehicles that any particular intersection approach can accommodate. At capacity ($V/C = 1.00$) there may be long queues of vehicles waiting upstream of the intersection and delays may be great (up to several signal cycles). |
| F | > 1.000 | Level of service F represents jammed conditions. Back-ups from locations downstream or on the cross street may restrict or prevent movement of vehicles out of the approach under consideration; hence, volumes carried are not predictable. V/C values are highly variable, because full utilization of the approach may be prevented by outside conditions. |

ICU – Intersection Capacity Utilization
Source: City of Irvine Traffic Study Guidelines

2.2.1 Intersection Analysis Time Period

Three conditions with the proposed high school project are evaluated for the weekday AM and PM peak hours. The weekday PM peak hour time period was included in the analysis of traffic conditions with the stadium.

2.2.2 Performance Standards

The traffic analysis incorporates the performance standards adopted by the City of Irvine. A capacity of 1,700 vehicles per hour per lane (vphpl) is assumed for both through lanes and dedicated turn lanes at the study intersections. Traffic signal phasing in the future condition is assumed to match the existing signal phasing (i.e. existing protected left turn = future protected left turn). The assumptions used in the analysis are summarized in Table 3-2.

Table 2-2 Peak Hour ICU Assumptions and Performance Standards

| | |
|-------------------------------|----------------------------------|
| Saturation Flow Rate | 1,700 vehicles per hour per lane |
| Clearance Interval | 0.05 seconds |
| Right-Turn-On-Red (RTOR) | Allowed |
| RTOR Saturation Flow Factor | 0.75 |
| Minimum Volume/Capacity (V/C) | None |

2.3 TRAFFIC COUNT DATA

Intersection turning movement counts were obtained from the *Heritage Fields Project 2012 General Plan Amendment and Zone Change Traffic Impact Analysis, 2012*. The counts were taken in 2012 and the City approved annual growth rate of 1.5% per year was applied to the year 2012 counts to estimate year 2013 volumes.

Average Daily Traffic (ADT) volumes on roadway segments in the vicinity of the project location were also obtained from the *Heritage Fields Project 2012 General Plan Amendment and Zone Change Traffic Impact Analysis*, and were collected in 2012.

2.4 FORECAST TRAFFIC VOLUMES

The future forecast intersection traffic volumes for year 2017, 2035, and post-2035 were obtained from the *Heritage Fields Project 2012 General Plan Amendment and Zone Change Traffic Impact Analysis, 2012*. The volumes in the Heritage Fields Project 2012 General Plan Amendment and Zone Change Traffic Impact Analysis were provided by ITAM for the year 2015, 2030, and post 2030. An annual growth rate of 1.5% per year was applied to these volumes to estimate year 2017, 2035, and post 2035 forecast volumes.

2.5 TRAFFIC ANALYSIS PERFORMANCE CRITERIA

The minimum acceptable level of service for intersections in the City of Irvine located outside of the Irvine Business Complex (IBC) is LOS "D." All of the project study intersections are located outside of the Irvine Business Complex (IBC).

For facilities that are forecast to operate at LOS "E" or LOS "F" in the baseline condition, project traffic is considered to result in a significant impact if it would cause the total ICU to increase by 0.02 or greater; or if the project brings an intersection from an acceptable LOS to an unacceptable LOS. Mitigation measures to return the ICU value back to the "without project" condition are required.

For intersections that are projected to be deficient in the most recent Circulation Phasing Analysis Report, a project-related increase in ICU of 0.01 or greater in the interim year (short term) would require mitigation measures to return the facility to baseline or contribution of fair share towards mitigation back to an acceptable level of service.

3. Existing Conditions

The project study area includes major arterials and intersections located within a 1.5-mile radius of Irvine High School No. 5. Descriptions of geometrical features and intersection level of service analysis results are included in this section.

3.1 ROADWAY CONDITIONS

3.1.1 Existing Roadway Network

Selected master plan arterials that provide access to Irvine High School No. 5 site are described in this section. Items of note include existing geometry, pedestrian and bicycle facilities, adjacent land uses, and the City of Irvine General Plan Master Plan of Arterial Highways (MPAH) designation.

Jeffrey Road is a six-lane major highway divided by a striped and raised median. On the City of Irvine Master Plan of Arterial Highways, Jeffrey Road is designated as a Major Highway between I-405 and Portola Parkway. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted. It provides access to the Interstate 5 freeway and the Interstate 405 freeway.

Sand Canyon Avenue runs east and west through the project area. It is generally a six lane roadway divided by a landscaped median. On the City of Irvine Master Plan of Arterial Highways, Sand Canyon Avenue is designated as a Major Highway (generally 6-lanes) between Portola Parkway and I-405. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Alton Parkway is a six-lane divided major highway with Class II bike lanes and classified as a Major Highway between the city limits southeast of Irvine Boulevard and the Laguna Freeway. It is classified as a Primary Highway on the City of Irvine Master Plan of Arterial Highways from the Laguna Freeway north to Culver Drive where it transitions into a four-lane divided primary highway. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Bake Parkway is a six to eight lane roadway divided by a landscaped or painted median. On the City of Irvine Master Plan of Arterial Highways, Bake Parkway is designated as a Major Highway (generally 6-lanes) between Irvine Boulevard and Laguna Canyon. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Portola Parkway is a six lane roadway north of Jeffrey divided by a landscaped median, and it transitions to a four lane roadway south of Jeffrey Road divided by a striped median then a landscaped median south of SR-133. On the City of Irvine Master Plan of Arterial Highways, Portola Parkway is designated as a Major Highway (generally 6-lanes) between the northern city limits south of Tustin Ranch Road and Jeffrey Road and a Primary Highway south of Jeffrey Road. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Irvine Boulevard is a six lane roadway divided by a landscaped median. On the City of Irvine Master Plan of Arterial Highways, Irvine Boulevard is designated as a Major Highway (generally

6-lanes) between Newport Avenue and the southern city limits south of Alton Parkway. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Trabuco Road runs north and south through the study area. On the City of Irvine Master Plan of Arterial Highways, Trabuco Road is designated as a Major Highway between Sand Canyon and the future SR-133 interchange. It is two lanes in each direction divided by a landscaped median. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Barranca Parkway runs north and south through the study area. It is currently a four-lane divided roadway. On the City of Irvine Master Plan of Arterial Highways, Barranca Parkway/Muirlands Boulevard is designated as a Primary Highway. Class II bicycle lanes are striped along both sides of the street throughout the study area, and on-street parking is not permitted.

Marine Way is currently a two-lane undivided roadway between Sand Canyon Avenue and El Toro Boulevard. In the City of Irvine Master Plan of Arterial Highways, Marine Way is designated as a Primary.

3.1.2 Average Daily Traffic (ADT) and Arterial Level of Service (LOS)

Average Daily Traffic (ADT) volumes for the study area network are summarized in Table 3-1. Year 2013 volumes were estimated by applying a growth factor equivalent to 1.5% per year to data obtained from the Heritage Fields Project 2012 – GPA/ZC Traffic Study. All study area segments currently operate at LOS C or better.

Table 3-1 Year 2013 ADT Volumes – No Project

| # | Street Name | Limits | # Lanes | Capacity | 2013 NP ADT | | |
|----|----------------|--------------------------------|---------|----------|-------------|------|-----|
| | | | | | ADT | V/C | LOS |
| 1 | Jeffrey Rd | Irvine Blvd to Bryan Av | 6D | 54,000 | 16,094 | 0.30 | A |

#D – total number of lanes in both directions divided by a raised median.

3.2 INTERSECTIONS

Fifty-two study intersections have been selected for analysis based on traffic patterns and forecast project trip distribution through the study area. The list of study intersections include was previously shown under Section 2.1.2.

The existing lane geometry and traffic control for each intersection are illustrated in Figure 3.1. and Year 2013 intersection volumes are shown in Figure 3.2. A summary of the level of service analysis results for the year 2013 without project condition is included in Table 3-2. One study intersections currently operates at a deficient level of service during the evening peak hour. The intersection of Sand Canyon Avenue and I-5 SB Ramps (#305) operates at LOS "F".

1. S – signalized intersection; U – unsignalized with 2-way or all-way stop control; R – roundabout
2. V/C = volume-to-capacity ratio
3. LOS E acceptable at Intersections #338, #367, #368

Figure 3.1 Existing Study Intersection Geometry and Control

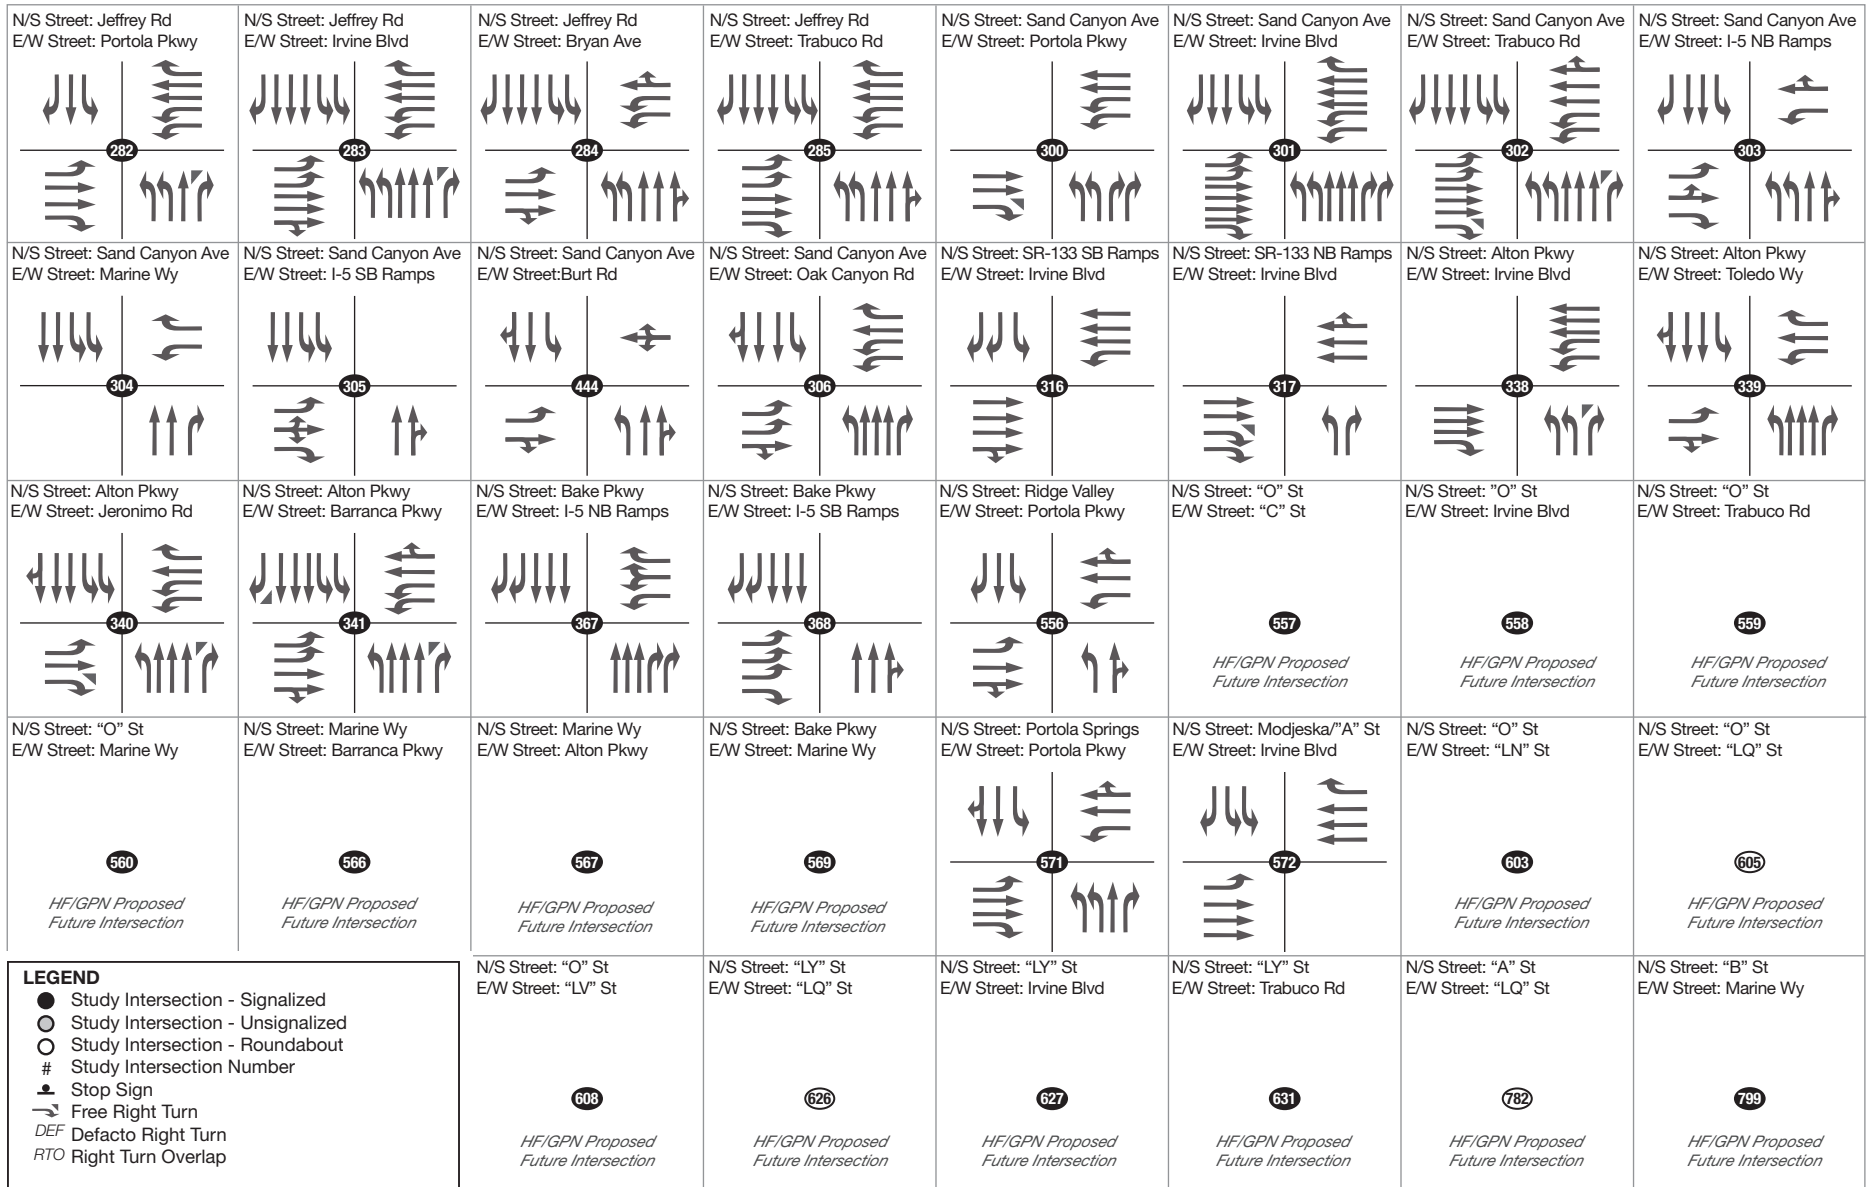

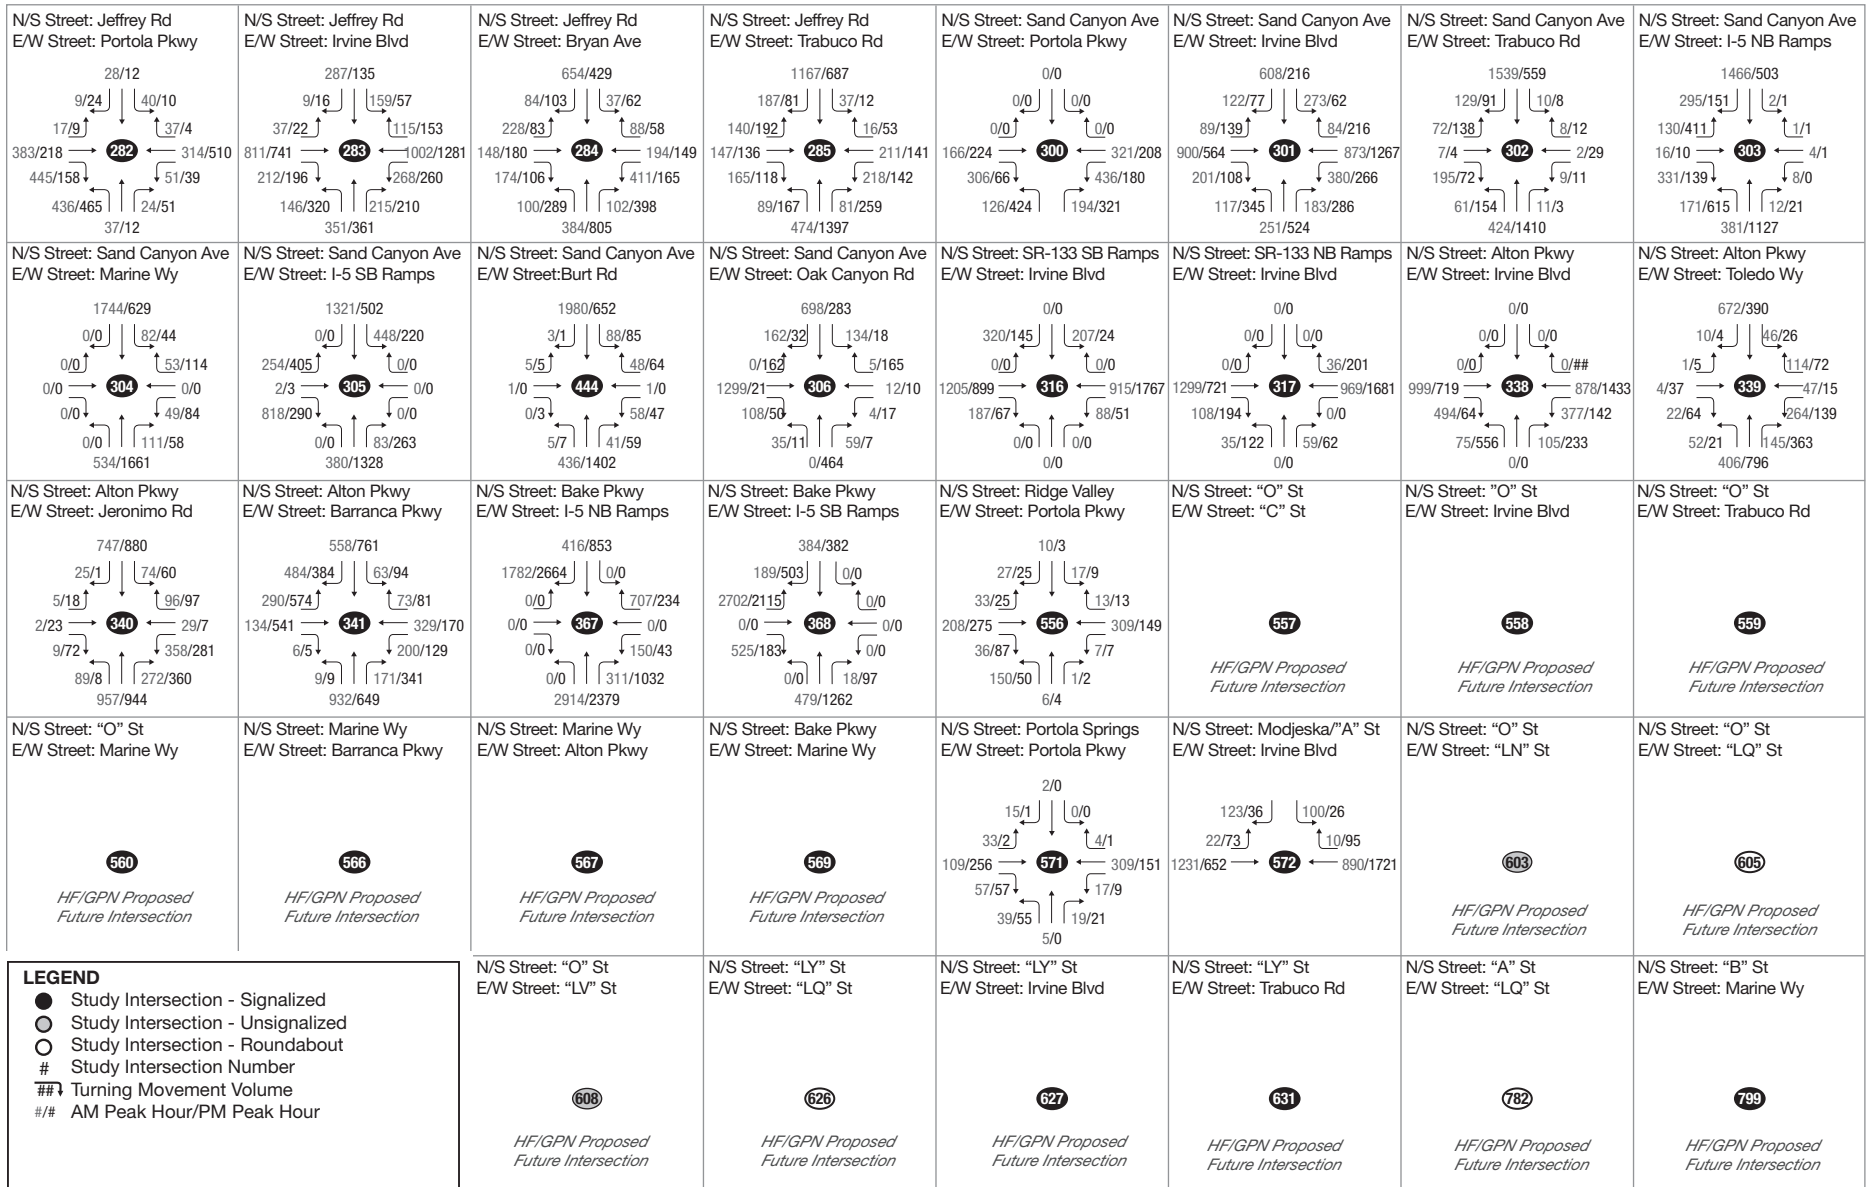

Figure 3.2 Year 2013 Peak Hour Volumes - No Project

4. Future Traffic Without the Proposed Project

This section develops the future No Build conditions in the study area with ambient traffic growth. Ambient traffic growth is the increase in traffic that is expected to occur in the study area due to general employment growth, housing growth and growth in regional through trips. Even if there was no change in housing or employment in the study area, there will be some background (ambient) traffic growth in the region. In addition to the existing condition analysis, future analysis has been conducted for two interim years (2017 and 2035) and the buildout condition (post-2035).

Year 2017 baseline volumes were derived by applying a growth factor of 1.03 (equivalent to an annual growth rate of 1.5% over two years) to the Year 2015 volumes from the Heritage Fields Project 2012 – GPA/ZC Traffic Study for the 2011 Approved Project, 2012 Modified Project Option 1 and 2012 Modified Project Option 2 scenarios. Year 2035 and Post 2035 baseline volumes were derived by applying a growth factor of 1.0773 (equivalent to an annual growth rate of 1.5% over five years) to the Year 2030 and Post 2030 volumes from the 2012 Traffic Study. The Post-2035 volumes are assumed to be equivalent to the Post-2030 volumes from the 2012 Traffic Study. It is assumed that the existing lane geometry and control remain unchanged in the No Build analysis.

4.1 PROJECTED TRAFFIC AND LEVEL OF SERVICE (LOS)

4.1.1 Year 2017

The intersection geometry control for 2017 (Approved 2011 Project) are shown in Figure 4.1. The intersection geometry controls for 2017 (2012 Modified Project Options 1 and 2) are shown in Figure 4.2. Year 2017 forecast intersection volumes are shown in Figure 4.3. A summary of the level of service analysis results for the year 2017 without project condition is included in Table 4-1. Three study intersections are expected to operate at a deficient level of service during the AM and/or PM peak hours:

- Sand Canyon Avenue and I-5 Southbound Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) – LOS E, PM
- “LQ” Street and Irvine Boulevard (#800) – LOS E, AM

Figure 4.5 Year 2017 Peak Hour Volumes - 2012 Modified Project Option 2 - No Project

4.1.2 Year 2035

The intersection geometry control for 2035 (Approved 2011 Project) are shown in Figure 4.6. The intersection geometry controls for 2035 (2012 Modified Project Options 1 and 2) are shown in Figure 4.7. Year 2035 forecast intersection volumes are shown in Figure 4.8. A summary of the level of service analysis results for the year 2035 without project condition is included in Table 4-4. Three study intersections are expected to operate at a deficient level of service during the AM and/or PM peak hours.

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM

4.1.3 Post-2035

The intersection geometry control for Post-2035 (Approved 2011 Project) is shown in Figure 4.6. The intersection geometry controls for Post-2035 (2012 Modified Project Options 1 and 2) are shown in Figure 4.7. Post-2035 forecast without project intersection volumes are shown in Figure 4.11. A summary of the level of service analysis results for the Post-2035 without project condition is included in Table 4-7. Four study intersections are expected to operate at a deficient level of service during the AM and/or PM peak hours.

5. Proposed Project

A description of the proposed project and the expected volume, distribution, and frequency of project-generated trips are presented in this section.

5.1 PROJECT DESCRIPTION

The Irvine Unified School District plans to build a new high school facility on a 40.3-acre site on the southeast corner of Irvine Boulevard and the future "B" Street, east of Sand Canyon Avenue and Highway 133 and west of Alton Parkway. The project site is on a portion of the former Marine Corps Air Station El Toro (MCAS El Toro), in Planning Area 51, Orange County Great Park, of the City of Irvine General Plan.

The school is scheduled to open in the year 2016 with a capacity of 2,600 students. It will also include a performing arts center, a gymnasium, and a stadium with 2,940 seats. The High School No. 5 facilities (the performing arts center, tennis courts, softball/baseball fields, etc.) may be available for public or non-enrollment population use on a very limited basis on weekends and weekday evenings. This activity would not significantly contribute to weekday peak hour trip generation. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium would likely host one varsity football game per week for about ten to twelve weeks per year.

5.2 TRIP GENERATION

The trip generation for the High School No. 5 project has been estimated using rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition. The trip generation rates and the forecast trip volumes for the High School land use category (ITE Code 530), are summarized in Table 5-1.

Table 5-1 - ITE Trip Generation for a High School Land Use (Code 530) with a Capacity of 2,600 Students

| | Weekday | AM | | | PM | | |
|-------|---------|--------|--------|-------|--------|--------|-------|
| | | In | Out | Total | In | Out | Total |
| Rates | 1.71 | 0.2856 | 0.1344 | 0.42 | 0.0611 | 0.0689 | 0.13 |
| Trips | 4,446 | 743 | 349 | 1,092 | 159 | 179 | 338 |

5.3 TRIP DISTRIBUTION

The project trip distribution for each analysis scenario has been developed based on the following assumptions:

- 5% of the project trips are generated by faculty and staff originating outside of the City of Irvine.
- 5% of the project trips are generated by faculty and staff originating within the City of Irvine but outside of the High School No. 5 attendance area boundary.

- The number of trips originating from each sub-area within the High School No. 5 attendance area boundary is proportional to the number of residential dwelling units located in that sub-area.

Based on a field inventory and information published online, there are approximately 10,242 existing residential housing units located within the High School No. 5 attendance area, plus an estimated 1,000 additional residential units under construction or planned to be built by 2016. For the purpose of this trip distribution, it is assumed that there are 11,242 residential dwelling units, not including the Great Park Neighborhoods development.

The trip origin and destination assumptions for each of the Interim Year 2017 scenarios are summarized in Table 5-2, and the assumptions for 2035 and Post-2035 are provided in Table 5-3. The appendix contains a memo that details the trip distribution for the study area for Year 2017, 2035 and Post-2035.

Table 5-2 - Interim Year 2017 Trip Distribution Assumptions

| Trip Origins/ Destinations | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 |
|---|---------|---------------------|---------------------|
| Outside of the City of Irvine | 5% | 5% | 5% |
| Within the City of Irvine but outside the HS No.5 attendance area boundary | 5% | 5% | 5% |
| Within the HS No.5 attendance area boundary but outside of the Great Park Neighborhoods | 65% | 63% | 63% |
| Within the Great Park Neighborhoods development area | 25% | 27% | 27% |

Table 5-3 - Year 2035 and Post-2035 Trip Distribution Assumptions

| Trip Origins/ Destinations | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 |
|---|---------|---------------------|---------------------|
| Outside of the City of Irvine | 5% | 5% | 5% |
| Within the City of Irvine but outside the HS No.5 attendance area boundary | 5% | 5% | 5% |
| Within the HS No.5 attendance area boundary but outside of the Great Park Neighborhoods | 63% | 49% | 49% |
| Within the Great Park Neighborhoods development area | 27% | 41% | 41% |

6. Existing Conditions With Proposed Project

The ultimate width of Irvine Boulevard in the vicinity of High School No.5 will include three lanes in each direction. The section of Irvine Boulevard fronting the project site (between "B" Street and "LQ" Street) will be constructed to provide sufficient width for a left turn pocket, three through lanes, and a right turn pocket on the eastbound approach to "LQ" Street. In the Year 2013 and Year 2017 analyses, there are only two eastbound receiving lanes on Irvine Boulevard east of "LQ" Street, so the eastbound approach to the intersection is modeled with a left turn pocket, two through lanes and a right turn pocket. Although the street will be wide enough to provide three eastbound through lanes, it will not operate with that capacity until a third eastbound receiving lane is constructed east of "LQ" Street.

Year 2013 with project (2011 Approved Project) ADT volumes on study area arterials are listed in Table 6-1. Tables 6-2 and 6-3 summarize the study area arterials ADT volumes for 2013 (2012 Modified Project Options 1 and 2), respectively. As seen in Table 6-1, all study area segments are calculated to operate at LOS C or better under 2013 with project conditions for all three scenarios.

Year 2013 with project (2011 Approved Project) intersection volumes are shown in Figure 6.1. Figures 6.2 and 6.3 show the 2013 - 2012 Modified Project Option 1 and 2, respectively. A summary of the level of service analysis results for the 2013 with project condition is included in Table 6-4. Table 6-5 includes a summary of the 2013 (2012 Modified Project Option 1) with project, and Table 6-6 includes the 2013 (2012 Modified Project Option 1) with project analysis summary results. As seen in Tables 6-2 to 6-4, all study area intersections are calculated to operate at LOS D or better under 2013 with project conditions with the exception of Bake Parkway and I-5 NB Ramps which operates at LOS F during the PM peak hour. There are no project impacts under the year 2013 scenarios.

7. Future Conditions With Proposed Project

The forecast year 2017, 2035, and post-2035 intersection volumes with project generated trips and the corresponding level of service analysis results are presented in this section.

7.1 PROJECTED TRAFFIC AND LOS

7.1.1 Year 2017

Year 2017 With Project (2011 Approved Project) ADT volumes on study area arterials are listed in Table 7-1. The following segment(s) are forecast to operate at unacceptable levels of service:

- Irvine Boulevard: "LQ" Street to Alton Parkway – LOS E

Year 2017 With Project for the 2012 Modified Project Options 1 and 2 ADT volumes are shown in Tables 7-2 and 7-3. Deficient segment locations for the 2012 Modified Project Options 1 and 2 scenarios include:

- Irvine Boulevard: "B" Street to "LQ" Street – LOS F
- Irvine Boulevard: "LQ" Street to Alton Parkway - LOS F

Year 2017 with project (2011 Approved Project) intersection volumes are shown in Figure 7.1. Figures 7.2 and 7.3 show the 2017 - 2012 Modified Project Option 1 and 2, respectively. A summary of the level of service intersection analysis results for the 2017 with project (2011 Approved Project) condition is included in Table 7-4. Table 7-5 includes a summary of the 2017 (2012 Modified Project Option 1) with project, and Table 7-6 includes the 2017 (2012 Modified Project Option 2) with project analysis summary results.

Year 2017 (2011 Approved Project) With Project deficient intersection locations:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E PM

Year 2017 (2012 Modified Project Option 1) With Project deficient intersection location:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS F, PM

Year 2017 (2012 Modified Project Option 2) With Project deficient intersection locations:

- Sand Canyon Avenue and Southbound I-5 Ramps (#305) – LOS E, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS F, PM

Table 7-1 Year 2017 (2011 Approved Project) Arterial Level of Service

| # | Street Name | Limits | Lanes ¹ | Capacity | 2017 NP ADT | | | 2017 WP ADT | | |

1. Number of lanes based on Exhibit 4-6 of the Heritage Fields Project 2012 – GPA/ZC Traffic Study, 2015 Circulation System, East Study Area

Consistent with City of Irvine traffic study guidelines, roadway segments with deficient LOS were further analyzed by examining peak hour levels of service. The resulting midblock peak hour V/C ratios for the arterial segments under year 2017 With Project conditions are summarized in Tables 7-4 to 7-6. As the summary table indicates, all arterial roadway segments are forecast to operate at acceptable levels of service during the peak hour, and none of the arterial segments exceed the adopted thresholds. No significant traffic impacts are identified.

Table 7-4 Year 2017 (2011 Approved Project) Peak Hour Arterial LOS Comparison

| Roadway | Limits | # of Lanes | Peak Hour Capacity | Refined ADT (WP) | Highest Peak Volumes (WP) | | Peak Hour V/C | Peak Hour LOS |

Figure 7.3 Year 2017 Peak Hour Volumes - 2012 Modified Project Option 2 - With Project

7.1.2 Year 2035

Year 2035 with project ADT volumes on study area arterials are listed in Table 7-7. Table 7-8 includes a summary of the 2035 (2012 Modified Project Option 1) with project, and Table 7-9 includes the 2035 (2012 Modified Project Option 2) with project analysis summary results.

Year 2035 With Project deficient segment locations for all three 2035 scenarios include:

- Irvine Boulevard: "LY Street to "Z" Street – LOS E
- Irvine Boulevard: "Z" Street to "B" St - LOS F
- Irvine Boulevard: "B" Street to "LQ" Street – LOS F
- Irvine Boulevard: "LQ" Street to Alton Parkway - LOS F
- Trabuco Road: SR-133 Fwy to "O" Street – LOS F

Year 2035 with project intersection volumes are shown in Figure 7.4. Figures 7.5 and 7.6 show the 2035 - 2012 Modified Project Option 1 and 2, respectively. A summary of the level of service intersection analysis results for the 2035 with project condition is included in Table 7-10. Table 7-11 includes a summary of the 2035 (2012 Modified Project Option 1) with project, and Table 7-12 includes the 2035 (2012 Modified Project Option 2) with project analysis summary results.

Year 2035 With Project (2011 Approved Project) deficient intersection locations:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM
- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E, AM
- "A-02" Street/"LQ" Street and Irvine Boulevard (#800) - LOS E, AM

Year 2035 (2012 Modified Project Option 1) With Project deficient intersection locations:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, AM and LOS F, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM

Year 2035 (2012 Modified Project Option 2) With Project deficient intersection locations:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, AM and LOS F, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM

Table 7-10 Year 2035 (2011 Approved Project) Arterial Level of Service

| # | Street Name | Limits | # Lanes | Capacity | 2035 NP ADT | | | 2035 WP ADT | | |

Consistent with City of Irvine traffic study guidelines, roadway segments with deficient LOS were further analyzed by examining peak hour levels of service. The resulting midblock peak hour V/C ratios for the arterial segments under year 2035 With Project conditions are summarized in Tables 7-13 to 7-15. As the summary tables indicate, all arterial roadway segments are forecast to operate at acceptable levels of service during the peak hour, and none of the arterial segments exceed the adopted thresholds. No significant impacts are identified.

Table 7-13 Year 2035 (2011 Approved Project) Peak Hour Arterial LOS Comparison

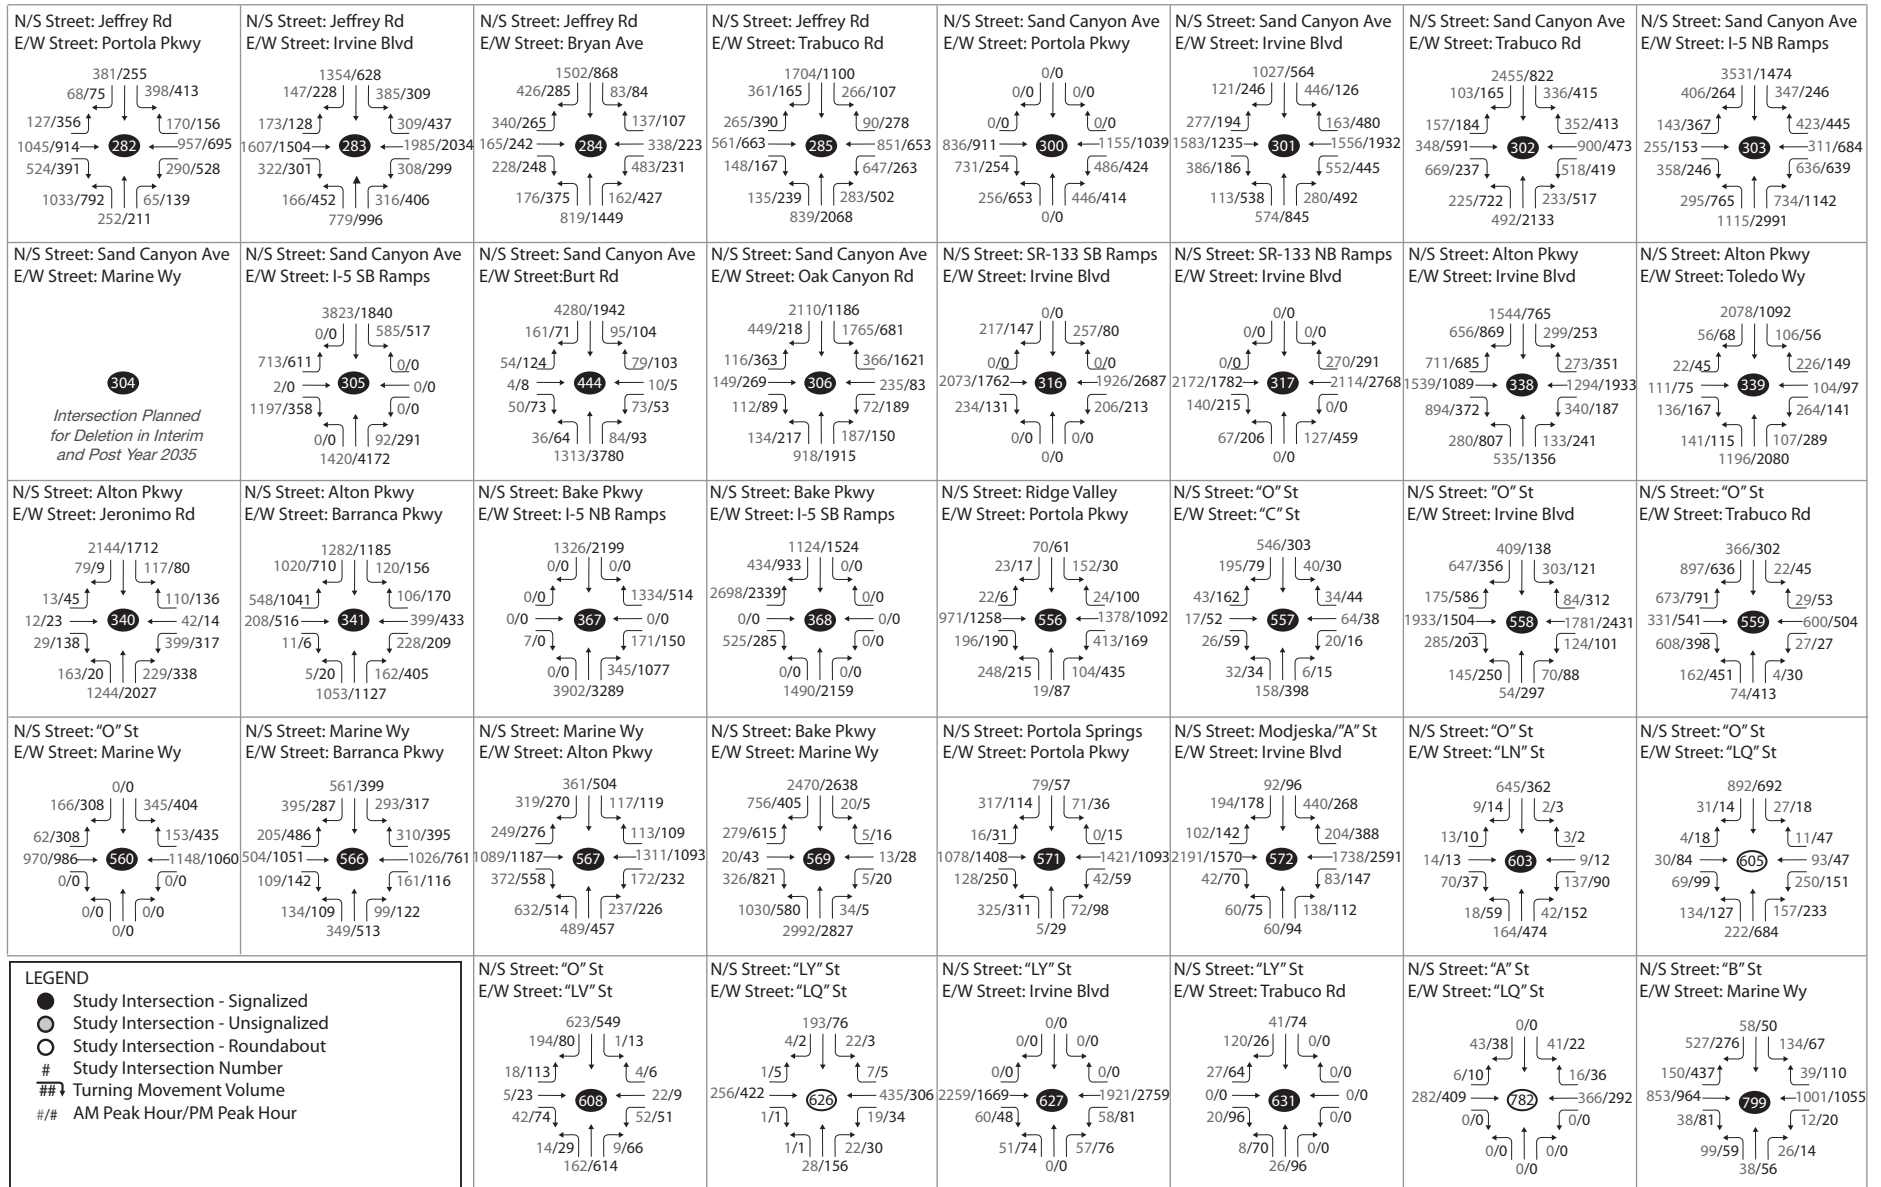

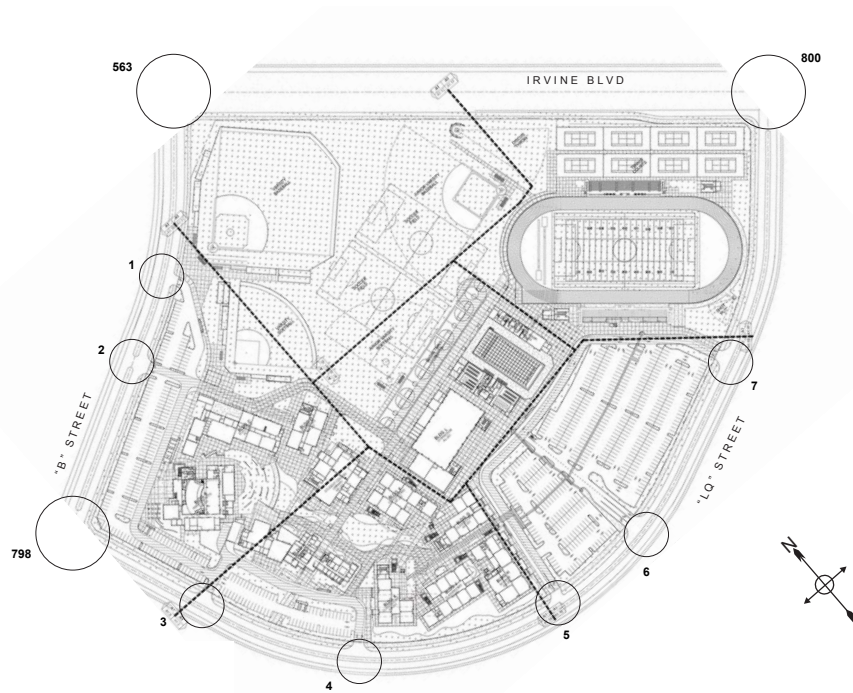

Figure 7.6 Year 2035 Peak Hour Volumes - 2012 Modified Project Option 2 - With Project

7.1.3 Post-2035

Post-2035 with project ADT volumes on study area arterials are listed in Table 7-13. Table 7-14 includes a summary of the Post-2035 (2012 Modified Project Option 1) with project, and Table 7-15 includes the Post-2035 (2012 Modified Project Option 2) with project analysis summary results.

Post-2035 With Project (2011 Approved Project) deficient segment locations includes:

- Sand Canyon Avenue: Portola Parkway to Irvine Boulevard - LOS E
- Sand Canyon Avenue: Trabuco Road to Marine Way - LOS E
- Portola Parkway: Jeffrey Road to Sand Canyon Avenue - LOS E
- Irvine Boulevard: "Z" Street to "B" Street - LOS E
- Irvine Boulevard: "B" Street to "LQ" Street – LOS E
- Irvine Boulevard: "LQ" Street to Alton Parkway - LOS F
- Trabuco Road: SR-133 Freeway to "O" Street – LOS F

Post-2035 With Project (2012 Modified Project Options 1 and 2) deficient segment locations include:

- Sand Canyon Avenue: Trabuco Road to Marine Way - LOS E
- Portola Parkway: Jeffrey Road to Sand Canyon Avenue - LOS E
- Irvine Boulevard: "Z" Street to "B" Street - LOS E
- Irvine Boulevard: "B" Street to "LQ" Street – LOS E
- Irvine Boulevard: "LQ" Street to Alton Parkway - LOS F
- Trabuco Road: SR-133 Freeway to "O" Street – LOS F

Post-2035 with project intersection volumes are shown in Figure 7.7. Figures 7.8 and 7.9 show the Post-2035 (2012 Modified Project Options 1 and 2), respectively. A summary of the level of service intersection analysis results for the Post-2035 with project condition is included in Table 7-16. Table 7-17 includes a summary of the 2035 (2012 Modified Project Option 1) with project, and Table 7-18 includes the Post-2035 (2012 Modified Project Option 2) with project analysis summary results.

Post-2035 With Project (2011 Approved Project) deficient intersection locations:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM
- Sand Canyon Avenue and Burt Road (#444) - LOS E, AM and PM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM
- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E, AM
- "A-02" Street/"LQ" Street and Irvine Boulevard (#800) - LOS E, AM

Post-2035 (2012 Modified Project Options 1 and 2) With Project deficient intersection locations:

- Sand Canyon Avenue and I-5 NB Ramps (#303) - LOS E, AM and PM
- Sand Canyon Avenue and I-5 SB Ramps (#305) - LOS F, AM and LOS E, PM
- Sand Canyon Avenue and Burt Road (#444) - LOS E, AM and PM
- Sand Canyon Avenue and Oak Canyon Road (#306) - LOS E, AM

Consistent with City of Irvine traffic study guidelines, roadway segments with deficient LOS were further analyzed by examining peak hour levels of service. The resulting midblock peak hour V/C ratios for the arterial segments under Post 2035 With Project conditions are summarized in Tables 7-22 to 7-24. As the summary tables indicate, all arterial roadway segments are forecast to operate at acceptable levels of service during the peak hour, and none of the arterial segments exceed the adopted thresholds. No significant impacts are identified.

Table 7-22 Post Year 2035 (2011 Approved Project) Peak Hour Arterial LOS Comparison

| Roadway | Limits | # of Lanes | Peak Hour Capacity | Refined ADT (WP) | Highest Peak Volumes (WP) | | Peak Hour V/C | Peak Hour LOS |

8. Special Analyses

The analyses for site access, parking, pedestrian and bicycle circulation and access, and stadium traffic are included in this section.

8.1 SITE ACCESS ANALYSIS

The Irvine High School No. 5 site has seven unsignalized access driveways located along “B” Street and “LQ” Street. Three additional signalized intersections are proposed along Irvine Boulevard at “B” Street and “LQ” Street, and at the intersection of “B” Street and “LQ” Street. These access points are proposed to serve a maximum capacity of 2,600 students and school employees that will utilize the facility during the school year. Tables 8-1 to 8-4 show the average delay for all seven access driveways for each scenario.

All access intersections are forecast to operate at an acceptable level of service during all analysis scenarios and both peak hour periods, with the exception of Driveway 6 on "LQ" Street (Intersection #6). This intersection is forecast to have an LOS E in the Year 2035 2011 Approved Project Scenario during the AM peak hour. The delay is caused by traffic coming out of the school parking lot, and can be mitigated by signaling the intersection.

8.1.1 Signal Warrant Analysis

A signal warrant analysis was conducted at all unsignalized study intersections per the Manual on Uniform Traffic Control Devices (MUTCD). Chapter 4 of the MUTCD includes criteria to determine if a traffic signal may be warranted at a stop-controlled or uncontrolled intersection. Traffic control may be needed if the criteria for one or more of the traffic signal warrants listed in Table 8-5 are met. If none of the warrants are satisfied, then a traffic signal should not be installed. However, the satisfaction of a traffic signal warrant or warrants does not in itself require the installation of traffic control signal. A signal should not be installed if it will seriously disrupt progressive traffic flow or if it will not improve overall safety or operation of the intersection.

Table 8-5: MUTCD Signal Warrants

| Warrant | | Intended Application | Based On |
|---------|-----------------------------|--|---|
| 1 | Eight-Hour Vehicular Volume | Where a large volume of intersecting traffic occurs throughout the day | Approach volumes over an 8-hour period |
| 2 | Four-Hour Vehicular Volume | Where both the major and minor streets experience high volumes during any 4 hours during the day | Volumes during the 4 highest hours |
| 3 | Peak Hour | Where the minor-street traffic suffers undue delay for a minimum of 1 hour of an average day | Peak hour approach volumes |
| 4 | Pedestrian Volume | Where traffic is so heavy that pedestrians experience excessive delay when crossing the major street | Pedestrian and major street volumes, traffic gaps |
| 5 | School Crossing | Where the fact that school children cross the major street is the main reason to consider a traffic signal | Distance to nearest signal, volumes |
| 6 | Coordinated Signal System | To maintain progressive movement and properly platoon vehicles in a coordinated signal system | Distance between signals, platooning |
| 7 | Crash Experience | Where the severity and frequency of crashes are the principal reason to consider installing a signal | Crash history, 8-hour volumes, speed limit |
| 8 | Roadway Network | To encourage concentration and organization of traffic flow on a roadway network | Peak hour and forecast volumes |

Source: Manual on Uniform Traffic Control (MUTCD) Chapter 4C

The peak hour signal warrant calculations are provided in the Appendix. The intersections of “B” Street & Irvine Boulevard (#563) and “LQ” Street & Irvine Boulevard (#800) satisfy the criteria for the peak hour signal warrant, and will be signalized as part of the project. Based on the forecast volumes, traffic signals are not warranted all at any of the other unsignalized study intersections and site access driveways scenarios in the Opening Year and Year 2017. However, Driveway 6 should be monitored and re-evaluated in when the Great Park Neighborhoods development occurs to the south of the project site. The intersection is forecast to operate at LOS E in the 2011 Approved Project and LOS D in the Modified Project Options 1 and 2 scenarios in the Year 2035. The signal warrants conducted in this study account for vehicle volumes, but not pedestrian volume. The intersection should be reevaluated for a signal warrant as part of the development and implementation of the roadway extension to the south.

8.1.2 Sight Distance Analysis

The driver of a vehicle approaching or departing from an intersection should have an unobstructed view of the intersection, including any traffic control devices, and sufficient lengths along the intersecting roadway to permit the driver to anticipate and avoid potential collisions. These unobstructed views form triangular areas known as sight triangles. Sight distance triangles for four-legged and three-legged intersections are shown in Exhibits 8.1 and 8.2.

Exhibit 8.1 - Sight Distance Triangles for 4-Legged Intersections

Exhibit 8.2 - Sight Distance Triangles for 3-Legged Intersections

Within this clear sight triangle, the objective is to remove or lower any object that obstructs the driver's view, if practical. Sight obstructions may include buildings, landscaping, fences, retaining walls, or the actual ground line.

Adequate sight distance should be provided for all access driveways and at intersections #563, #800, and #798. The sight triangles for these locations may be identified in a subsequent design phase when construction level drawings of the project site and surrounding roadways are available.

Table 8-6 includes the minimum sight distances for a passenger car to complete a left turn from a major roadway listed in the City of Irvine Transportation Design Procedures.

Table 8-6 Sight Distance Minimum Standards – Project Intersections

| Street | Design Speed (mph) | Min Sight Distance (feet) |
|-------------|--------------------|---------------------------|
| Irvine Blvd | 60 | 530 |
| "B" St | 25 | 225 |
| "LQ" St | 25 | 225 |

8.2 PARKING ANALYSIS

Irvine High School No. 5 is proposing to provide 784 surface parking spaces per the most current site plan. Parking spaces allocated to staff and performing arts would be accessible from Driveways 1 and 2 along "B" Street, visitor parking spaces would be accessible from Driveways 3 and 4 along "LQ" Street, and student, stadium event, and additional staff parking would be accessible from Driveways 5, 6, and 7 along "LQ" Street. The design of the surface parking spaces is still on-going, and the final number of parking spaces may change. Forecast peak period parking generation per the Institute of Transportation Engineers (ITE) Parking Generation Manual is 598 parking spaces. Table 8-7 summarizes the peak period forecast parking demand for the project.

Table 8-7 ITE Parking Generation – High School

| Use Classification | Unit | Quantity | ITE Rate (Spaces/Unit) | Peak Parking Generation |
|------------------------|----------|----------|------------------------|-------------------------|
| High School - Suburban | Students | 2,600 | 0.23 | 598 |

Source: Institute of Transportation Engineers Parking Generation Manual, 4th Edition

Based on the forecast parking generation and proposed parking supply, the proposed parking supply exceeds forecast peak period parking demand.

8.3 PEDESTRIAN AND BICYCLE CIRCULATION

The preliminary site plan for Irvine High School No. 5 shows landscaped pedestrian pathways throughout the school, with connections to the various surface parking facilities. There are currently Class II bike lanes along Irvine Boulevard, Alton Parkway, and Sand Canyon Avenue. It is recommended that the school provide bicycle lockers or racks on site, as well as signage to increase awareness and safety of bicyclists and pedestrians. No pedestrian or bicycle circulation issues are identified at this time, and no mitigation measures are required.

8.4 STADIUM TRAFFIC

The Irvine Unified School District is proposing to build a 2,940-seat athletic stadium as part of the High School No. 5 campus. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium would likely host one varsity football game per week for about ten to twelve weeks per year.

The proposed stadium is not expected to generate a significant number of trips during the AM peak hour, so the PM peak hour is the only time period selected for analysis. Any of the other High School No. 5 facilities (the performing arts center, tennis courts, softball/baseball fields, etc.) may be available for public or non-enrollment population use on a very limited basis on weekends and weekday evenings. This activity is not anticipated to contribute significantly to peak hour trip generation.

8.4.1 Stadium Trip Generation

The stadium land use category is not currently listed in the Institute of Transportation Engineers (ITE) Trip Generation Manual, and there is limited local or national survey data available for this type of use. High school stadiums typically do not generate a significant number of vehicle trips during the peak hours of adjacent street traffic, but volumes may vary depending on the type of event and the scheduled start time. Stadium uses that would not attract large numbers of spectators are not expected to generate any additional trips. Vehicle trips generated by sports team practices and activities that take place on the track and football field are already captured in the standard trip generation for the high school. The only additional trips that are expected to be generated by the stadium would be for events with a significant volume of spectators seated in the bleachers.

High school stadium activities that attract large numbers of spectators tend to be seasonal, and include football games, graduation ceremonies, and occasional community events. Varsity football games are typically scheduled for Thursday, Friday, or Saturday evenings between late August and early December.

The stadium at High School No. 5 is proposed to be comparable in size and function to the stadium at Irvine High School, and it is expected that the daily and peak hour trip generation for the proposed High School No. 5 will be similar to the trip generation at Irvine Stadium. Driveway counts were made at Irvine Stadium in an attempt to identify the number of vehicle trips that enter and exit the stadium site during a typical stadium event. Varsity football games with attendance at stadium capacity are forecast to generate a total of 605 evening peak hour trips (430 inbound and 175 outbound). This value is based on driveway volumes observed at Irvine Stadium and Institute of Transportation Engineers (ITE) *Trip Generation* rates for Heritage Park.

Evening peak hour trips are not expected to occur on typical weekdays. As a worst case scenario, the number of forecast project-related trips for a stadium event where every bleacher seat is filled is added to the weekday PM peak hour volumes for each intersection in the level of service analysis. This would be representative of a sold out varsity football game held on a Thursday night.

8.4.2 Average Daily Trips

The daily traffic volume for a stadium spectator event at High School No. 5 is forecast to be 2,176 trips, which includes 1,088 inbound trips and 1,088 outbound trips throughout the day. Daily trip generation for a special event land use like a high school stadium is highly variable, and depends on a number of local factors including demographics, weather patterns, team performance, and other site-specific criteria. The high school stadium is not one of the land use categories included in the Institute of Transportation Engineers (ITE) *Trip Generation* Manual, so two other sources were used to estimate the daily trip rate for the High School No. 5: 1) The San

Diego Municipal Code Land Development Code Trip Generation Manual³, and 2) the Estancia High School Stadium Traffic and Parking Impact Analysis⁴.

The City of San Diego Traffic and Engineering Division recommended trip generation rate for a Sports Facility land use is 1 trip per attendee. A spectator sport facility is defined as a specially designed land use where people gather to watch a team sport or other attraction, such as the San Diego Qualcomm Stadium, the Sports Arena, or the Del Mar Race Track. This type of land use generally attracts more regional trips than a local high school football stadium, and would be expected to have a higher daily trip generation rate. The Newport-Mesa Unified School District proposed to build a stadium at Estancia High School in 2001. Estancia High is another local Orange County school located in the City of Costa Mesa. The Estancia High School Traffic and Parking Impact Analysis utilized a daily trip generation rate of 0.47 trips per seat, and forecast a total of 1,186 trips for a 2,523-seat stadium.

The daily trip generation rate of 0.74 trips per seat used for the High School No. 5 is based on an average of the City of San Diego Traffic and Engineering Division trip rate for a Sports Facility (1 trip per attendee) and the rate used for the Estancia High School stadium (0.47 trips per seat). This rate represents a conservative estimate for capacity events at High School No. 5.

The stadium trips would not be generated on typical weekdays throughout the year. Total driveway trips of 2,176 are only expected to occur on days when a varsity football game, graduation ceremony, or other special event that fills the stadium would occur. Varsity football games are scheduled for Friday evenings between late August and early December, and graduation ceremonies occur in the month of June. This traffic would have the characteristics of a special event, and would not contribute to the typical daily traffic volumes year round.

8.4.3 Stadium Trip Distribution

The stadium trip distribution for each analysis scenario has been developed based on the following assumptions:

- 68% of the trips generated for stadium events would originate within the High School No. 5 attendance area boundary, and follow a distribution similar to typical weekday traffic.
- 32% of the trips generated for stadium events would originate outside of the High School No. 5 attendance area boundary, with 3% coming from the east, 8% coming from the south, and 21% coming from the west. Trip distribution percentages on local arterials are proportional to 2011 daily traffic volumes published by the City of Irvine.

The inbound and outbound trip distribution through the study area during the PM peak time period for all analysis scenarios are provided in the Appendix. The intersection level of service results are shown in Tables 8-8 to 8-17.

9. Congestion Management Program (CMP) Requirements

The Orange County Congestion Management Program (CMP) monitors the level of service at all designated CMP intersections in the County. Irvine Boulevard is designated as a CMP roadway within the study area. Two CMP intersections are located in the traffic study area for High School No. 5. These intersections are:

- Irvine Boulevard and the SR-133 NB Ramps
- Irvine Boulevard and the SR-133 SB Ramps

Table 9-1 summarizes the anticipated level of service for these two intersections with and without the project for each of the future analysis years.

Table 9-1 CMP Intersection LOS Comparison

| Intersection | | AM Peak Hour | | | | | | PM Peak Hour | | | | | |

The minimum acceptable level of service for a CMP intersection is LOS E. No significant traffic impacts are anticipated to CMP intersections as a result of the proposed High School No. 5. No mitigation measures are necessary.

10. Recommended Mitigation Measures

The proposed Irvine High School No. 5 is forecast to cause project impacts at the following intersections:

Year 2035 – 2011 Approved Project

- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E – AM Peak Hour
- "LQ" Street and Irvine Boulevard (#800) – LOS E – AM Peak Hour

Post Year 2035 – 2011 Approved Project

- SR-133 Northbound Ramps and Irvine Boulevard (#317) – LOS E – AM Peak Hour
- "LQ" Street and Irvine Boulevard (#800) – LOS E – AM Peak Hour

In order to bring the intersection back to an acceptable level of service or pre-project conditions, the following mitigation measures are required and listed in Table 10-1.

Table 10-1 Recommended Mitigation Measures

| # | Location | Improvement |
|---|--------------------------------------|--|
| Year 2035 - 2011 Approved Project | | |
| 317 | SR-133 NB Ramps and Irvine Boulevard | Reconfigure west leg of intersection to allow a third eastbound thru-lane. |
| 800 | "LQ" Street and Irvine Boulevard | Add northbound left-turn lane, resulting in dual-northbound left-turn lanes. |
| Post Year 2035 - 2011 Approved Project | | |
| 317 | SR-133 NB Ramps and Irvine Boulevard | Reconfigure west leg of intersection to allow a third eastbound thru-lane. |
| 800 | "LQ" Street and Irvine Boulevard | Add northbound left-turn lane, resulting in dual-northbound left-turn lanes. |

11. Conclusion

The Irvine Unified School District plans to build a new high school facility on a 40.3-acre site on the southeast corner of Irvine Boulevard and the future "B" Street, east of Sand Canyon Avenue and Highway 133 and west of Alton Parkway. The project site is on a portion of the former Marine Corps Air Station El Toro (MCAS El Toro), in Planning Area 51, Orange County Great Park, of the City of Irvine General Plan.

The school would serve a maximum capacity of 2,600 students and include a performing arts center, a gymnasium, and a stadium with 2,940 seats. The high school is expected to generate up to 4,446 vehicle trips on a typical weekday, with 1,092 trips (743 inbound and 349 outbound) during the AM peak hour and 338 trips (159 inbound and 179 outbound) during the PM peak hour. Varsity football games with attendance at stadium capacity are forecast to generate a total of 494 trips (351 inbound and 143 outbound) during the evening peak hour. The stadium is not expected to generate a significant number of trips during the AM peak hour.

The project is forecast to cause a significant impact at two intersections in multiple scenarios. The recommended mitigation measures that would bring the impacted intersections back to an acceptable level of service or pre-project conditions are summarized in Section 9.

As part of the traffic analysis, special analyses were conducted for site access, parking, pedestrian and bicycle circulation and with stadium.

- **Site Access** - The Irvine High School No. 5 site has seven unsignalized access driveways located along "B" Street and "LQ" Street. Three additional signalized intersections are proposed along Irvine Boulevard at "B" Street and "LQ" Street, and at the intersection of "B" Street and "LQ" Street. All access intersections are forecast to operate at an acceptable level of service during all analysis scenarios and both peak hour periods, with the exception of Driveway 6 on "LQ" Street (Intersection #6). This intersection is forecast to have an LOS E in the Year 2035 2011 Approved Project Scenario during the AM peak hour. The delay is caused by traffic coming out of the school parking lot, and can be mitigated by signalizing the intersection.
- **Signal Warrant Analysis** - A signal warrant analysis was conducted at all unsignalized study intersections per the Manual on Uniform Traffic Control Devices (MUTCD). Based on the forecast volumes, traffic signals are not warranted at all unsignalized study intersections and site access driveways for all scenarios. However, Driveway 6 should be reevaluated when the roadway to the south is implemented to account for pedestrian volume and buildout of the intersection to a four-legged intersection.
- **Sight Distance Analysis** – Sight distance for access roadways leading up to the High School should be maintained. It is recommended that a clear line of sight be maintained at Intersections "B" Street/Irvine Boulevard (#563), "A-02" Street/"LQ" Street and Irvine Boulevard (#800), and "B" Street and "LQ" Street (#798).
- **Parking Analysis** - Irvine High School No. 5 is proposing to provide 784 surface parking spaces per the most current site plan. Forecast peak period parking generation per the Institute of Transportation Engineers (ITE) Parking Generation Manual is 598 parking spaces. Based on the forecast parking generation and proposed parking supply, the proposed parking supply exceeds forecast peak period parking demand.

- **Pedestrian and Bicycle Circulation** - The preliminary site plan for Irvine High School No. 5 shows landscaped pedestrian pathways throughout the school with connections to the various surface parking facilities. There are currently Class II bike lanes along Irvine Boulevard, Alton Parkway, and Sand Canyon Avenue. It is recommended that the school provide bicycle lockers or racks on site, as well as signage to increase awareness and safety of bicyclists and pedestrians.
- **Stadium Traffic** - The Irvine Unified School District is proposing to build a 2,940-seat athletic stadium as part of the High School No. 5 campus. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium is not expected to generate a significant number of trips during the AM peak hour, so the PM peak hour is the only time period selected for analysis.

Based on the PM peak hour analysis for the stadium, no project related impacts are forecast.

No significant traffic impacts are anticipated to CMP intersections as a result of the proposed High School No. 5.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement (L-T-R), Control (Uncontrolled/Stop Sign), Lanes, Final Volume, and Approach Delay.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=17]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=397]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future.

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | | South Bound | | | | East Bound | | | | West Bound | | | | | | | |
|----------------------------------|--------------|-----|---|---|--------------|---|-----|---|------------|---|---|---|------------|---|---|---|---|---|----|---|
| Movement: | L | - | T | - | R | L | - | T | - | R | L | - | T | - | R | L | - | T | - | R |
| Control: | Uncontrolled | | | | Uncontrolled | | | | Stop Sign | | | | Stop Sign | | | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 157 | 0 | 0 | 0 | 0 | 223 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 17 | 0 |
| Major Street Volume: | | | | | 380 | | | | | | | | | | | | | | | |
| Minor Approach Volume: | | | | | 17 | | | | | | | | | | | | | | | |
| Minor Approach Volume Threshold: | | | | | 477 | | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | |
|--------------|--------------|----|---|--------------|---|---|------------|---|---|------------|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 81 | 0 | 0 | 0 | 0 | 48 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 9 |
| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 8.7 | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=9]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=138]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxxx | | | xxxxxxx | | | xxxxxxx | | | 9.1 | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=17]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=397]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.1 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=17]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=397]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxxx | | | xxxxxxx | | | xxxxxxx | | | 9.1 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=17]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=397]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

2012 Modified Project Option 2

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #3 Driveway 3 & "LQ" St

Average Delay (sec/veh): 2.1 Worst Case Level Of Service: A[9.0]

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 sub-columns for movements (L, T, R). Rows include Control, Rights, and Lanes.

Volume Module table with 12 columns for volume components: Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Final Volume.

Critical Gap Module table with 12 columns for gap components: Critical Gp, FollowUpTim.

Capacity Module table with 12 columns for capacity components: Cnflct Vol, Potent Cap., Move Cap., Volume/Cap.

Level of Service Module table with 12 columns for LOS components: 2Way95thQ, Control Del, LOS by Move, Movement, Shared Cap., SharedQueue, Shrd ConDel, Shared LOS, ApproachDel, ApproachLOS.

Note: Queue reported is the number of cars per lane.

2012 Modified Project Option 2

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #4 Driveway 4 & "LQ" St

Average Delay (sec/veh): 3.4 Worst Case Level Of Service: A[9.8]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module table with 12 columns representing different traffic movements and 7 rows of volume data.

Critical Gap Module table with 12 columns and 2 rows of critical gap and follow-up time data.

Capacity Module table with 12 columns and 4 rows of capacity-related data.

Level of Service Module table with 12 columns and 8 rows of level of service and delay data.

Note: Queue reported is the number of cars per lane.

IUSD High School #5 TIA

2012 Modified Project Option 2

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #5 "LQ" St & Driveway 5

Average Delay (sec/veh): 3.5 Worst Case Level Of Service: A[9.0]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module table with 12 columns representing volume adjustments and final volume for each bound.

Critical Gap Module table with 12 columns showing critical gap and follow-up time for each bound.

Capacity Module table with 12 columns showing conflict volume, potential capacity, and volume/capacity ratio.

Level of Service Module table with 12 columns showing 2Way95thQ, control delay, LOS by movement, shared capacity, and approach delay.

Note: Queue reported is the number of cars per lane.

2012 Modified Project Option 2

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #6 "LQ" St & Driveway 6

Average Delay (sec/veh): 4.0 Worst Case Level Of Service: B[10.4]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module table with 12 columns representing traffic flows and 6 rows for Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, and Final Volume.

Critical Gap Module table with 12 columns and 2 rows for Critical Gp and FollowUpTim.

Capacity Module table with 12 columns and 4 rows for Cnflct Vol, Potent Cap., Move Cap., and Volume/Cap.

Level of Service Module table with 12 columns and 7 rows for 2Way95thQ, Control Del, LOS by Move, Movement, Shared Cap., Shrd ConDel, Shared LOS, ApproachDel, and ApproachLOS.

Note: Queue reported is the number of cars per lane.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 8.7 | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=9]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=138]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.
