Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | | | |
|--------------|--------------|-----|---|--------------|-----|---|------------|---|---|------------|---|---|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 162 | 7 | 0 | 378 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 7 | | | |
| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.1 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=554]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | | | | |
|----------------------------------|--------------|-----|---|--------------|-----|---|------------|---|---|------------|---|---|---|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 162 | 7 | 0 | 378 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 7 | | | | |
| Major Street Volume: | 547 | | | | | | | | | | | | | | | | | |
| Minor Approach Volume: | 7 | | | | | | | | | | | | | | | | | |
| Minor Approach Volume Threshold: | 380 | | | | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

 Approach[southbound][lanes=1][control=Stop Sign]
 Signal Warrant Rule #1: [vehicle-hours=0.0]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=11]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=3][total volume=707]
 SUCCEED - Total volume greater than or equal to 650 for intersection
 with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.7 | | | | | | | |

 Approach[westbound][lanes=1][control=Stop Sign]
 Signal Warrant Rule #1: [vehicle-hours=0.0]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=4]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=3][total volume=490]
 FAIL - Total volume less than 650 for intersection
 with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| Minor Approach Volume Threshold: | 415 | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.1 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=542]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #787 "Z" St & "LQ" St

Average Delay (sec/veh): 0.3 Worst Case Level Of Service: B[12.9]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module: Table with 12 columns representing different volume metrics and 4 columns for North, South, East, and West bounds.

Critical Gap Module: Table with 12 columns for gap metrics and 4 columns for North, South, East, and West bounds.

Capacity Module: Table with 12 columns for capacity metrics and 4 columns for North, South, East, and West bounds.

Level of Service Module: Table with 12 columns for LOS metrics and 4 columns for North, South, East, and West bounds.

Note: Queue reported is the number of cars per lane.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | | | |
|--------------|--------------|-----|---|--------------|-----|---|------------|---|---|------------|---|---|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 269 | 2 | 0 | 366 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 4 | | | |
| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.7 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=4]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=641]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Volume Module table with 12 columns representing different traffic movements and 7 rows of volume-related metrics.

Critical Gap Module table with 12 columns and 2 rows of critical gap and follow-up time data.

Capacity Module table with 12 columns and 4 rows of capacity-related metrics.

Level of Service Module table with 12 columns and 8 rows of level of service and delay data.

Note: Queue reported is the number of cars per lane.

Level Of Service Computation Report

ICU 1(Loss as Cycle Length %) Method (Base Volume Alternative)

Intersection #282 Jeffrey Rd & Portola Pkwy

Cycle (sec): 100 Critical Vol./Cap.(X): 0.817
Loss Time (sec): 5 Average Delay (sec/veh): xxxxxx
Optimal Cycle: 56 Level Of Service: D

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 rows: Movement, Control, Rights, Min. Green, Y+R, Lanes.

Volume Module:

Table with 13 columns for various volume and adjustment factors like Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Reduced Vol, PCE Adj, MLF Adj, Final Volume.

Saturation Flow Module:

Table with 13 columns for saturation flow parameters like Sat/Lane, Adjustment, Lanes, Final Sat.

Capacity Analysis Module:

Table with 13 columns for capacity analysis parameters like Vol/Sat, Crit Moves.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 8.6 | | | | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=7]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=166]
FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #6 "LQ" St & Driveway 6

Base Volume Alternative: Peak Hour Warrant NOT Met

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Approach, Movement, Control, Lanes, Final Volume, and Approach Del.

Approach[eastbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=71]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=201]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement (L-T-R), Control (Uncontrolled/Stop Sign), Lanes, Final Volume, and Approach Delay.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=166]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future.

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

| Minor Approach Volume: | | | | | 7 | | | | | | | | | | | | | | | |
| Minor Approach Volume Threshold: | | | | | 710 | | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=1.5]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=2493]
SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=7]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=2493]
SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

ICU 1(Loss as Cycle Length %) Method (Base Volume Alternative)

Intersection #339 Alton Pkwy & Toledo Wy

Cycle (sec): 100 Critical Vol./Cap.(X): 0.420
Loss Time (sec): 5 Average Delay (sec/veh): xxxxxx
Optimal Cycle: 21 Level Of Service: A

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, Min. Green, Y+R, and Lanes.

Volume Module: Table with 13 columns representing different volume and adjustment factors like Base Vol, Growth Adj, Initial Bse, etc.

Saturation Flow Module: Table with 13 columns representing saturation flow factors like Sat/Lane, Adjustment, Lanes, Final Sat.

Capacity Analysis Module: Table with 13 columns representing capacity analysis factors like Vol/Sat, Crit Moves.

Level Of Service Computation Report

ICU 1(Loss as Cycle Length %) Method (Base Volume Alternative)

Intersection #341 Alton Pkwy & Barranca Pkwy

Cycle (sec): 100 Critical Vol./Cap.(X): 0.454
Loss Time (sec): 5 Average Delay (sec/veh): xxxxxx
Optimal Cycle: 22 Level Of Service: A

Table with columns: Approach (North Bound, South Bound, East Bound, West Bound), Movement (L, T, R), Control, Rights, Min. Green, Y+R, Lanes.

Volume Module: Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Reduced Vol, PCE Adj, MLF Adj, Final Volume.

Saturation Flow Module: Sat/Lane, Adjustment, Lanes, Final Sat.

Capacity Analysis Module: Vol/Sat, Crit Moves.

Level Of Service Computation Report

2000 HCM Operations Method (Base Volume Alternative)

Intersection #367 Bake Pkwy & I-5/I-405 SB Ramps

Cycle (sec): 100 Critical Vol./Cap.(X): 1.015
Loss Time (sec): 0 Average Delay (sec/veh): 13.3
Optimal Cycle: 180 Level Of Service: B

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 sub-columns (L, T, R) for Movement, Control, Rights, Min. Green, Y+R, and Lanes.

Volume Module: Table with 12 columns for various volume and adjustment factors like Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Reduced Vol, PCE Adj, MLF Adj, Final Volume.

Saturation Flow Module: Table with 12 columns for saturation flow factors like Sat/Lane, Adjustment, Lanes, Final Sat.

Capacity Analysis Module: Table with 12 columns for capacity analysis factors like Vol/Sat, Crit Moves, Green/Cycle, Volume/Cap, Delay/Veh, User DelAdj, AdjDel/Veh, LOS by Move, HCM2kAvgQ.

Note: Queue reported is the number of cars per lane.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 8.6 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=166]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=14]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=3][total volume=117]
 FAIL - Total volume less than 650 for intersection
 with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 sub-columns for movements (L, T, R). Rows include Control, Rights, and Lanes.

Table with 12 columns representing volume modules for each movement. Rows include Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, and Final Volume.

Table with 12 columns representing critical gap modules. Rows include Critical Gap and FollowUp Time.

Table with 12 columns representing capacity modules. Rows include Conflict Vol, Potent Cap., Move Cap., and Volume/Cap.

Table with 12 columns representing level of service modules. Rows include 2Way95thQ, Control Del, LOS by Move, Movement, Shared Cap., Shared Queue, Shrd ConDel, Shared LOS, ApproachDel, and ApproachLOS.

Note: Queue reported is the number of cars per lane.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | | | |
|--------------|--------------|----|---|--------------|----|---|------------|---|---|------------|---|---|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | | | |
| Lanes: | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 64 | 0 | 0 | 95 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 7 | |
| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 8.6 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=166]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement (L-T-R), Control (Uncontrolled/Stop Sign), Lanes, Final Volume, and Approach Delay.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=603]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future.

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #1 "B" St & Driveway 1

Base Volume Alternative: Peak Hour Warrant NOT Met

| Approach: | North Bound | | | South Bound | | | East Bound | | | West Bound | | | | | | | |
|----------------------------------|--------------|-----|---|--------------|-----|---|------------|---|---|------------|---|---|---|---|---|---|---|
| Movement: | L | T | R | L | T | R | L | T | R | L | T | R | | | | | |
| Control: | Uncontrolled | | | Uncontrolled | | | Stop Sign | | | Stop Sign | | | | | | | |
| Lanes: | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| FinalVolume: | 0 | 361 | 4 | 0 | 235 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 3 | | | |
| Major Street Volume: | 600 | | | | | | | | | | | | | | | | |
| Minor Approach Volume: | 3 | | | | | | | | | | | | | | | | |
| Minor Approach Volume Threshold: | 356 | | | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future.

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

| Major Street Volume: | 1140 | | | | | | | | | | | | | | | | | | |
| Minor Approach Volume: | 66 | | | | | | | | | | | | | | | | | | |
| Minor Approach Volume Threshold: | 318 | | | | | | | | | | | | | | | | | | |

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=525]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #787 "Z" St & "LQ" St

Average Delay (sec/veh): 0.3 Worst Case Level Of Service: B[14.1]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module: Table with 12 columns representing different volume components like Base Vol, Growth Adj, Initial Bse, etc.

Critical Gap Module: Table with 12 columns showing critical gap and follow-up time values.

Capacity Module: Table with 12 columns showing conflict volume, potential capacity, and volume/capacity ratios.

Level of Service Module: Table with 12 columns showing delay, LOS, and approach delay values.

Note: Queue reported is the number of cars per lane.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=525]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #1 "B" St & Driveway 1

Average Delay (sec/veh): 0.1 Worst Case Level Of Service: A[9.6]

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 rows: Movement (L-T-R), Control (Uncontrolled, Stop Sign), Rights (Include), Lanes (0-1).

Volume Module: Table with 4 columns (North, South, East, West) and 3 rows (L, T, R) for Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Final Volume.

Critical Gap Module: Table with 4 columns (North, South, East, West) and 3 rows (L, T, R) for Critical Gap, FollowUpTime.

Capacity Module: Table with 4 columns (North, South, East, West) and 3 rows (L, T, R) for Conflict Vol, Potent Cap., Move Cap., Volume/Cap.

Level of Service Module: Table with 4 columns (North, South, East, West) and 3 rows (L, T, R) for 2Way95thQ, Control Del, LOS by Move, Shared Cap., SharedQueue, Shrd ConDel, Shared LOS, ApproachDel, ApproachLOS.

Note: Queue reported is the number of cars per lane.

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #2 "B" St & Driveway 2

Average Delay (sec/veh): 1.4 Worst Case Level Of Service: A[9.9]

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, and Lanes.

Volume Module: Table with 12 columns representing traffic volumes and adjustments for Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, and Final Volume.

Critical Gap Module: Table with 12 columns showing critical gap and follow-up time values.

Capacity Module: Table with 12 columns showing conflict volume, potential capacity, move capacity, and volume/capacity ratios.

Level of Service Module: Table with 12 columns showing level of service metrics like 2Way95thQ, Control Del, LOS by Move, Movement, Shared Cap, Shared Queue, Shrd ConDel, Shared LOS, ApproachDel, and ApproachLOS.

Note: Queue reported is the number of cars per lane.

Level Of Service Computation Report

2000 HCM Unsignalized Method (Base Volume Alternative)

Intersection #631 "LY" St & Trabuco Rd

Average Delay (sec/veh): 3.4 Worst Case Level Of Service: A[10.0]

Table with 4 columns: Approach (North Bound, South Bound, East Bound, West Bound) and 3 rows: Movement (L-T-R), Control (Uncontrolled, Stop Sign), Rights (Include), Lanes (1 0 1 0 0, etc.)

Volume Module: Table with 12 columns for volume components (Base Vol, Growth Adj, Initial Bse, User Adj, PHF Adj, PHF Volume, Reduct Vol, Final Volume) and 4 rows for each bound.

Critical Gap Module: Table with 12 columns for gap components (Critical Gap, FollowUpTim) and 4 rows for each bound.

Capacity Module: Table with 12 columns for capacity components (Conflict Vol, Potent Cap., Move Cap., Volume/Cap) and 4 rows for each bound.

Level of Service Module: Table with 12 columns for LOS components (2Way95thQ, Control Del, LOS by Move, Movement, Shared Cap., SharedQueue, Shrd ConDel, Shared LOS, ApproachDel, ApproachLOS) and 4 rows for each bound.

Note: Queue reported is the number of cars per lane.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 10.3 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=612]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

IUSD High School #5 TIA
Post Year 2035 With Stadium
2011 Approved Project

Level Of Service Computation Report

ICU 1(Loss as Cycle Length %) Method (Base Volume Alternative)

Intersection #800 "A-02" St/"LQ" St & Irvine Blvd

Cycle (sec): 100 Critical Vol./Cap.(X): 0.921
Loss Time (sec): 5 Average Delay (sec/veh): xxxxxx
Optimal Cycle: 101 Level Of Service: E

Table with 4 columns: North Bound, South Bound, East Bound, West Bound. Rows include Movement, Control, Rights, Min. Green, Y+R, and Lanes.

Volume Module table with 12 columns representing different volume metrics and 12 rows of adjustment factors.

Saturation Flow Module table with 12 columns and 4 rows of saturation flow data.

Capacity Analysis Module table with 12 columns and 2 rows of capacity analysis data.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.7 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=534]

FAIL - Total volume less than 650 for intersection
with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[eastbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=58]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=730]

FAIL - Total volume less than 650 for intersection with less than four approaches.

Approach[westbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.1]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=22]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=730]

FAIL - Total volume less than 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

| ApproachDel: | xxxxxx | | | xxxxxx | | | xxxxxx | | | 9.7 | | | | | | | |

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=3]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=685]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Technical Memorandum

| | | | |
|---------------------|---|-------------------|---------------|
| To/Attention | Kerwin Lau | Date | July 23, 2013 |
| From | Bill Delo | Project No | 34239 |
| cc | Dwayne Mears, Lorrie Ruiz | Steno | I |
| Subject | IUSD High School No. 5 Trip Generation and Distribution | | |

The purpose of this technical memorandum is to summarize the trip generation and distribution assumptions that will be used in the traffic impact analysis for the Irvine Unified School District's proposed High School No. 5 project.

Background

High School No. 5 Project

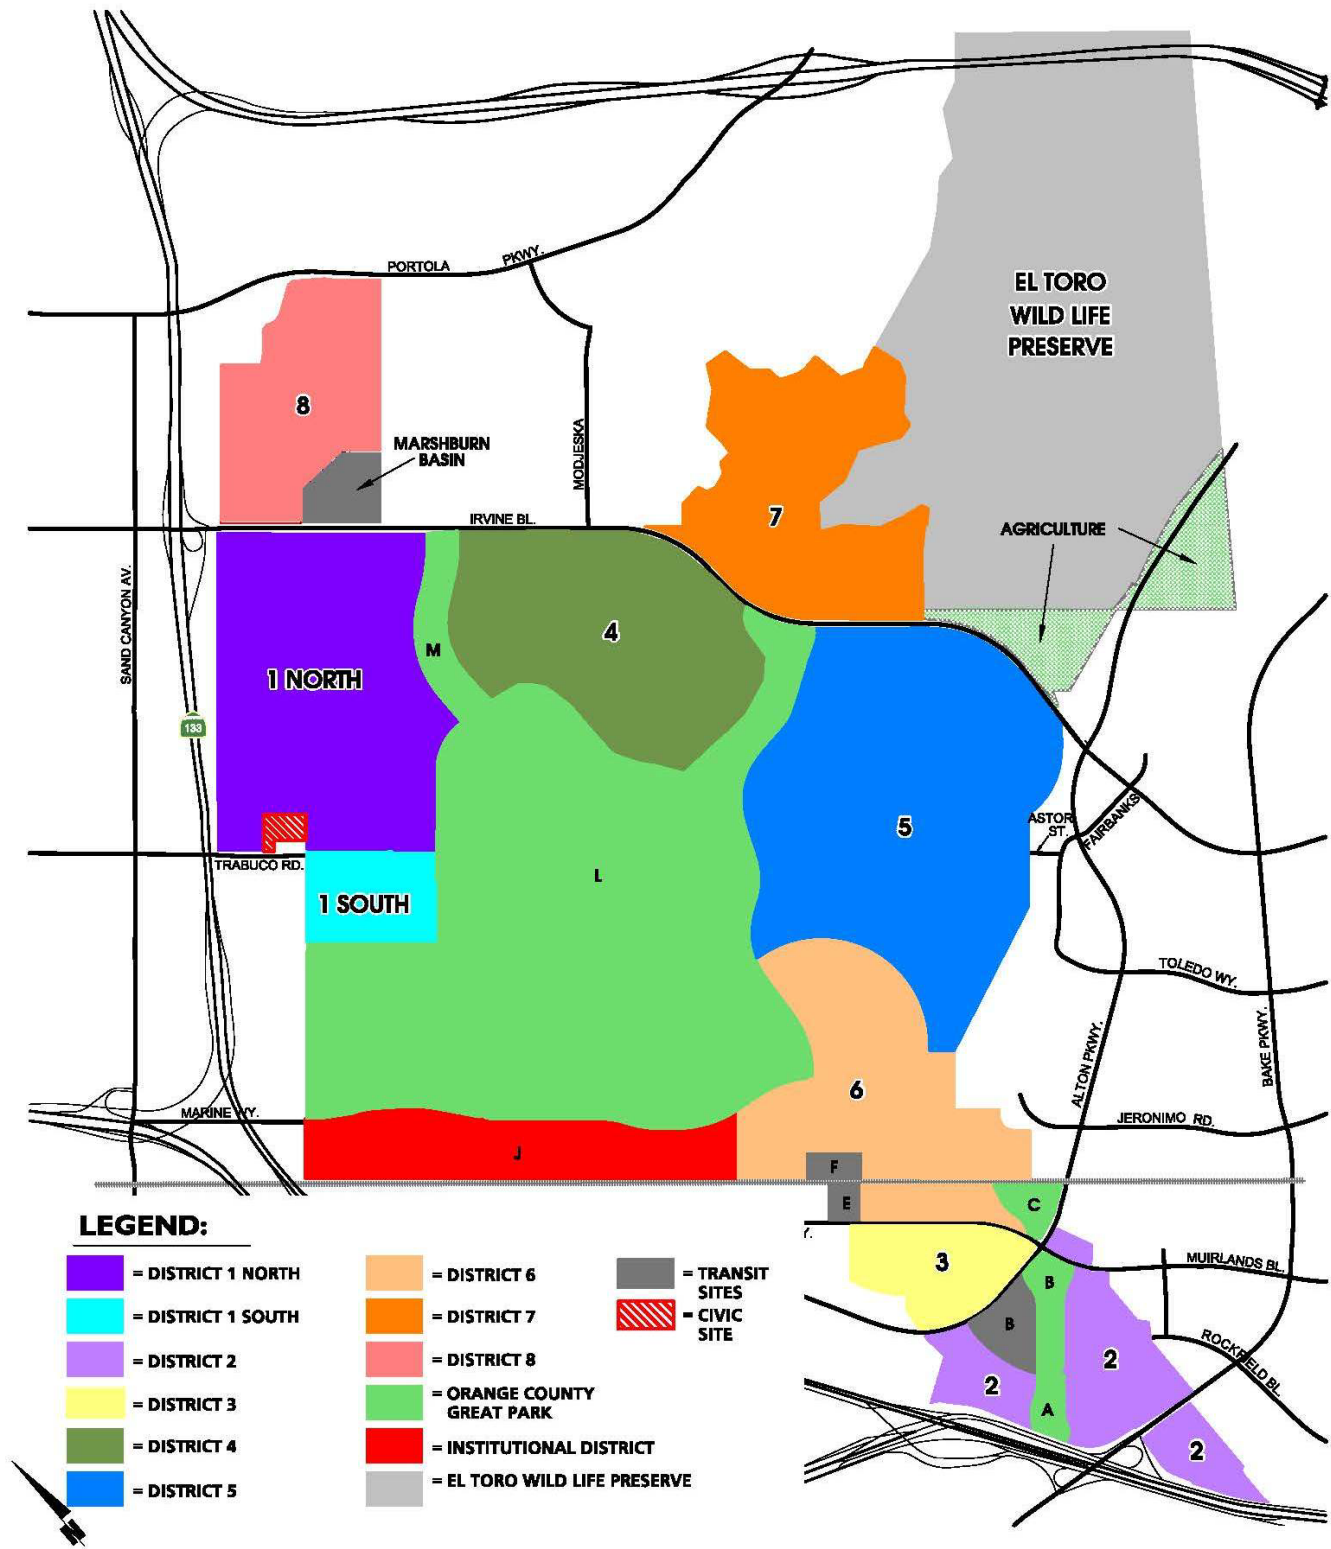

The Irvine Unified School District plans to build a new high school facility on a 40.3-acre site on the southeast corner of Irvine Boulevard and the future "B" Street, east of Sand Canyon and Highway 133 and west of Alton Parkway. The project site is on a portion of the former Marine Corps Air Station El Toro (MCAS El Toro), in Planning Area 51, Orange County Great Park, of the City of Irvine General Plan. The school is scheduled to open in the year 2017 with a capacity of 2,600 students. It will also include a performing arts center, a gymnasium, and a stadium with 2,940 seats.

Great Park Neighborhoods Development

As part of the Great Park Neighborhoods Project, the MCAS El Toro site will be developed into master-planned neighborhoods or "Districts" that include a variety of housing, shops, restaurants, workplaces, educational institutions, parks, trails and outdoor activities. In 2011, the Heritage Fields/Great Park Neighborhoods Project was approved (the "2011 Approved Project") to develop 4,712 residential dwelling units (2,741 single family detached and 1,971 multi-family units) and over six million square feet of non-residential uses in the buildout condition. The 2011 Approved Project did not include a high school facility as part of its land use plan.

In 2012, a General Plan Amendment and Zone Change (the "2012 Modified Project") was prepared that included two development options with an increase in residential development units and a decrease in non-residential acreage compared to the 2011 Approved Project. The Project Area Districts as illustrated in Exhibit 2-2 of the Heritage Fields Project 2012 General Plan Amendment/Zone Change Traffic Study are provided in Figure 1. The 2012 Modified Project Options 1 and 2 each include 9,318 residential dwelling units (3,358 single family detached and 5,960 multi-family units) but propose a slightly different allocation of those units between neighborhood Districts 1N and 1S. In both the 2012 Modified Project Options 1 and 2, a 2,600-student high school is included in the buildout scenario.

Figure 1. Heritage Fields Project Area Districts

Source: Heritage Fields Project 2012 - GPA/ZC Traffic Study Exhibit 2-2

Kerwin Lau – July 23, 2013

The 2012 Modified Project Option 1 proposes the same level of single family detached and multi-family residential development as the 2011 Approved Project, with the following exceptions:

- In District 5, the community recreational and retail land uses proposed in the 2011 Approved Project are replaced with 1,194 single family detached residential units and 1,690 multi-family residential units.
- In District 6, the mortuary, golf, agriculture, educational institution and research and development land uses proposed in the 2011 Approved Project are replaced with 1,722 multi-family residential units along with multi-use land use.
- In District 7, the 840 single family detached residential units proposed in the 2011 Approved Project are replaced with 692 single family detached residential units and 148 multi-family residential units.

The 2012 Modified Project Option 2 proposes the same level of single family detached and multi-family residential development as the 2012 Modified Project Option 1, with the following exceptions:

- In District 1N, 258 additional multi-family residential units are proposed in place of retail land use in Option 2.
- In District 1S, the 429 multi-family residential units proposed in Option 1 are replaced with 171 multi-family residential units plus retail and multi-use land uses.

The levels of residential development proposed in the 2011 Approved Project and 2012 Modified Project Options 1 and 2 in the Year 2015 and Post-2030 conditions are summarized in Table 1.

AP – Approved Project; DU – dwelling units; MF – multi-family; MP – Modified Project; SFD – single family detached

Kerwin Lau – July 23, 2013

IUSD Boundaries

The attendance area for High School No. 5 is assumed to be bounded by Jeffrey Road to the west, the Interstate 5 (I-5) freeway to the south, City limits/Bake Parkway to the east and City limits/State Route 241 (SR-241) to the north. This area is currently part of the Northwood High School and Irvine High School attendance areas.

Analysis Scenarios

The traffic analysis for the High School No. 5 project will include the following scenarios. This list is contingent on the availability of this data as part of the “baseline” and “pending” versions of ITAM and subject to change based on direction from the City of Irvine.

- No Project - 2011 Approved Project Base
- No Project - 2012 Modified Project Option 1 Base
- No Project - 2012 Modified Project Option 2 Base
- No Project - 2011 Approved Project Base Plus Cumulative Projects
- No Project - 2012 Modified Project Option 1 Base Plus Cumulative Projects
- No Project - 2012 Modified Project Option 2 Base Plus Cumulative Projects
- With Project - 2011 Approved Project Base
- With Project - 2012 Modified Project Option 1 Base
- With Project - 2012 Modified Project Option 2 Base
- With Project - 2011 Approved Project Base Plus Cumulative Projects
- With Project - 2012 Modified Project Option 1 Base Plus Cumulative Projects
- With Project - 2012 Modified Project Option 2 Base Plus Cumulative Projects

An AM and PM peak hour analysis of each scenario will be made for the following timeframes:

- Existing Condition (Year 2013) ← not mentioned in NOP comments
- Project Opening (Year 2017)
- Interim (Year 2035)
- Buildout (Post-2035)

Project Trip Generation

The trip generation for the High School No. 5 project has been estimated using rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition. The trip generation rates and the forecast trip volumes for the High School land use category (ITE Code 530), are summarized in Table 2.

Table 2 - ITE Trip Generation for a High School Land Use (Code 530) with a Capacity of 2,600 Students

Kerwin Lau – July 23, 2013

Project Trip Distribution

The project trip distribution for each analysis scenario has been developed based on the following assumptions:

- 5% of the project trips are generated by faculty and staff originating outside of the City of Irvine.
- 5% of the project trips are generated by faculty and staff originating within the City of Irvine but outside of the High School No. 5 attendance area boundary.
- The number of trips originating from each sub-area within the High School No. 5 attendance area boundary is proportional to the number of residential dwelling units located in that sub-area.

Based on a field inventory and information published online, there are an estimated 10,073 residential housing units located within the High School No. 5 attendance area, not including the proposed Great Park Neighborhoods development. Figure 2 shows the number of housing units in each area in the Project Opening Year 2017. Figure 3 shows the number of units in each area in the Year 2035 and Post-2035 conditions.

The trip origin and destination assumptions for each of the Project Opening Year 2017 scenarios are summarized in Table 3, and the assumptions for Year 2035 and Post-2035 are provided in Table 4.

Table 3 - Project Opening Year 2017 Trip Distribution Assumptions

| Trip Origins/ Destinations | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 |
|---|----------------|-----------------------------|-----------------------------|
| Outside of the City of Irvine | 5% | 5% | 5% |
| Within the City of Irvine but outside the HS No.5 attendance area boundary | 5% | 5% | 5% |
| Within the HS No.5 attendance area boundary but outside of the Great Park Neighborhoods | 68% | 66% | 67% |
| Within the Great Park Neighborhoods development area | 22% | 24% | 23% |

Table 4 - Year 2035 and Post-2035 Trip Distribution Assumptions

| Trip Origins/ Destinations | 2011 AP | 2012 MP Option 1 | 2012 MP Option 2 |
|---|----------------|-----------------------------|-----------------------------|
| Outside of the City of Irvine | 5% | 5% | 5% |
| Within the City of Irvine but outside the HS No.5 attendance area boundary | 5% | 5% | 5% |
| Within the HS No.5 attendance area boundary but outside of the Great Park Neighborhoods | 61% | 47% | 47% |
| Within the Great Park Neighborhoods development area | 29% | 43% | 43% |

Figure 2. Opening Year 2017 Residential Dwelling Units

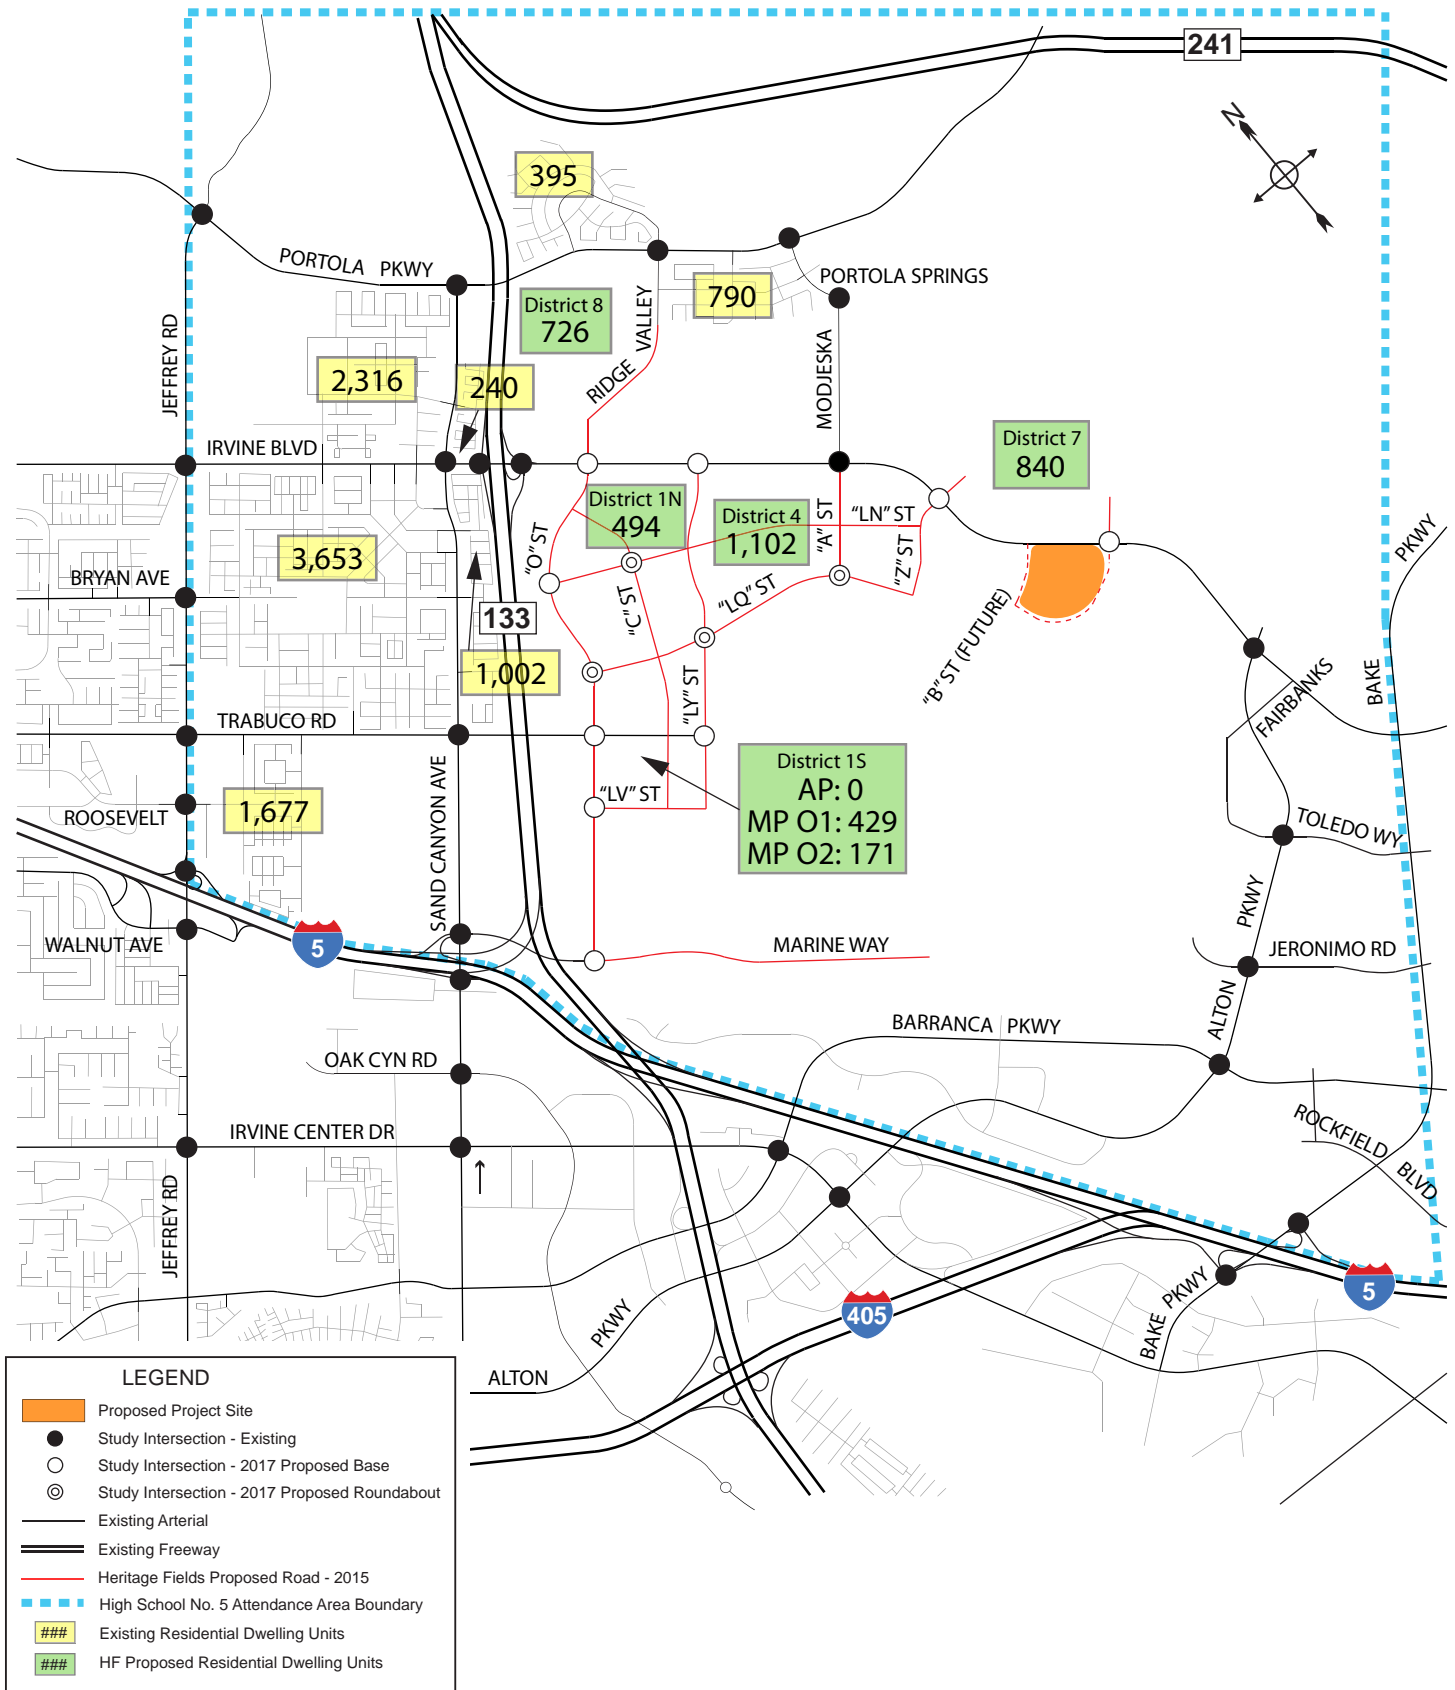

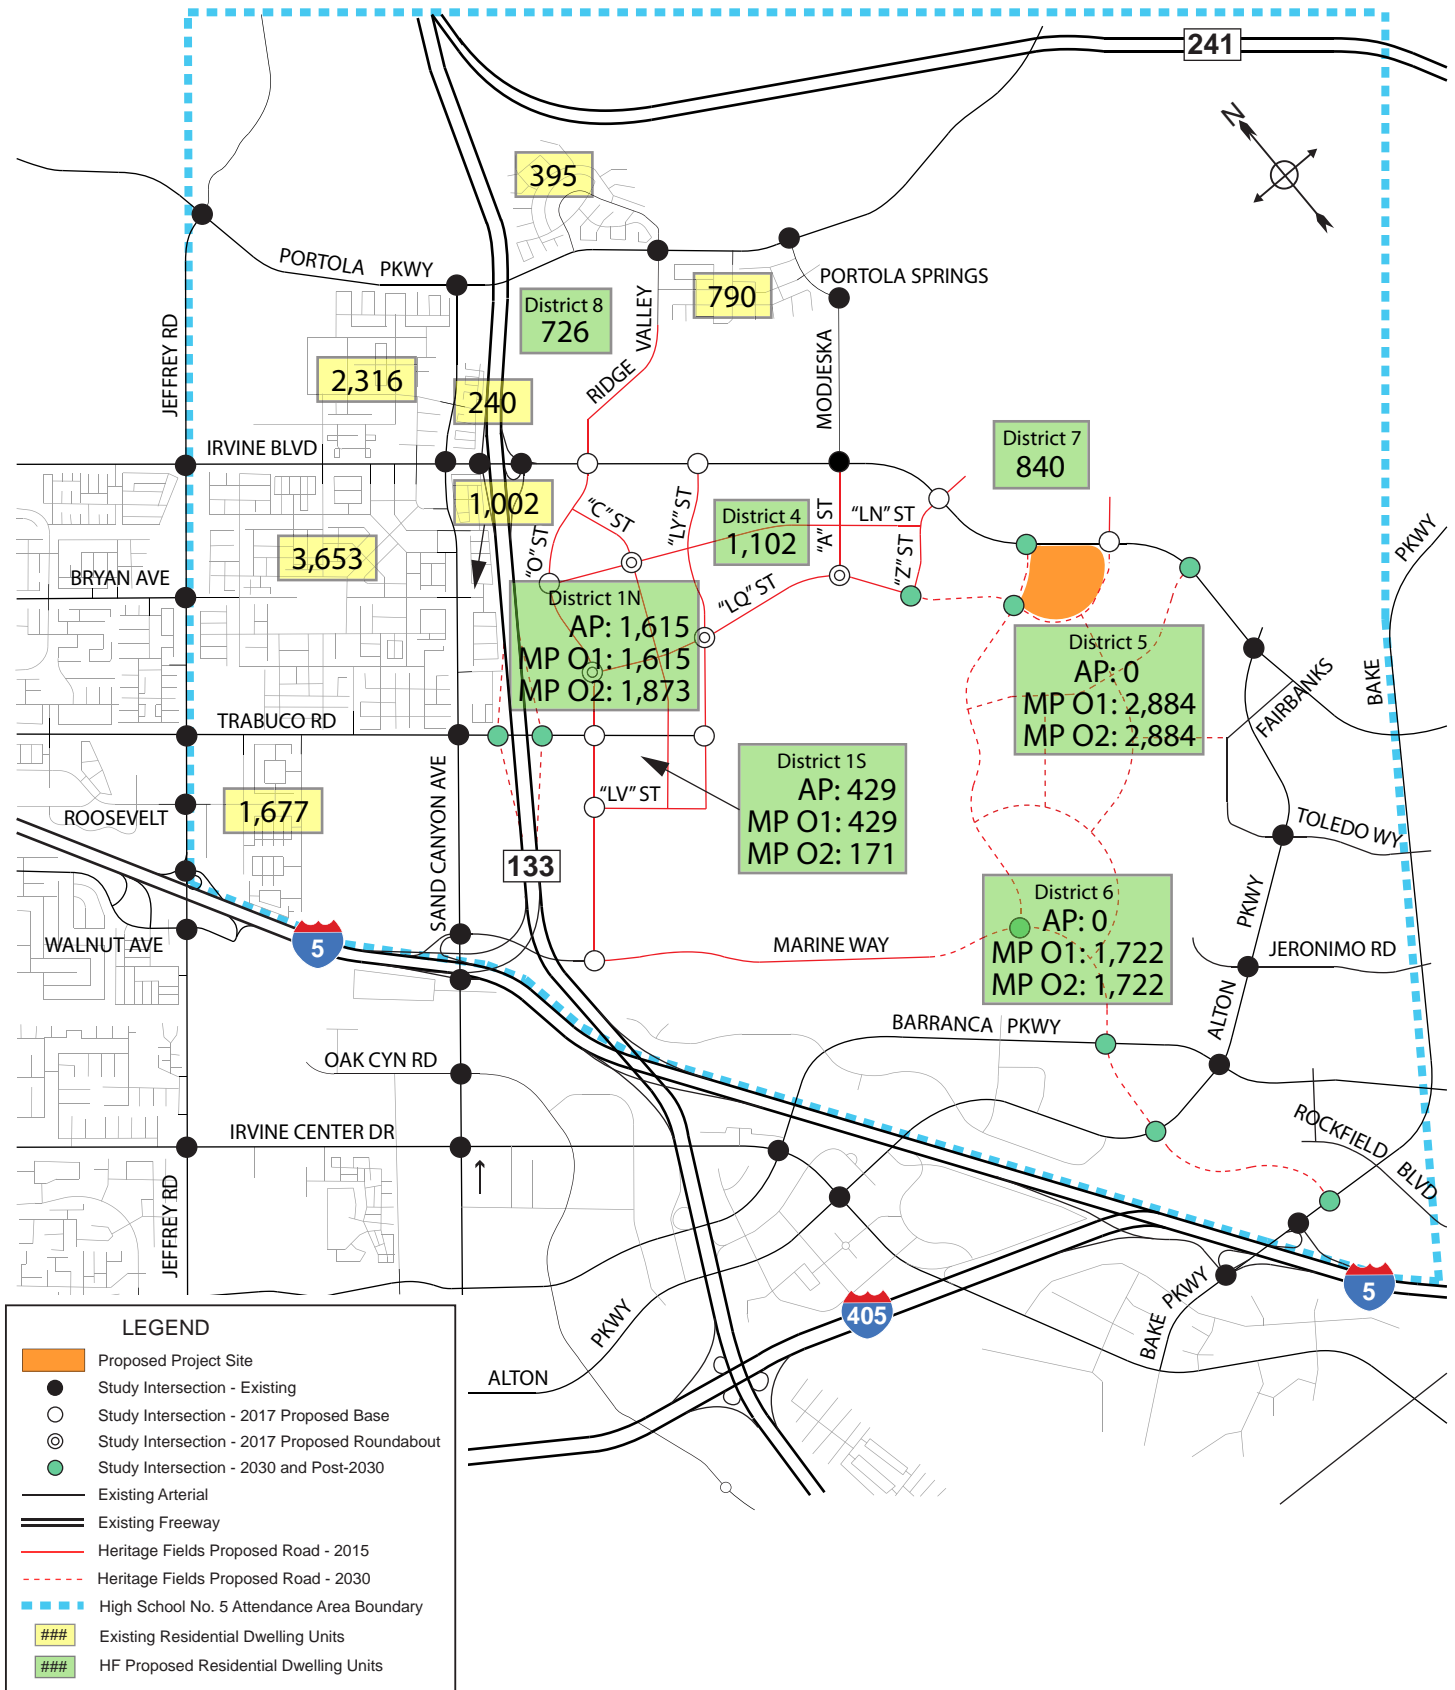

Figure 3. Year 2035 and Post-2035 Residential Dwelling Units

Kerwin Lau – July 23, 2013

The inbound project trip distribution through the study area during the AM and PM peak time periods in the Project Opening Year 2017 with the 2011 Approved Project is shown in Figure 4, and the outbound trip distribution is shown in Figure 5. During both the AM and PM peak periods, inbound trips to the project site are assumed to originate at home, and outbound trips are assumed to return home. Therefore, the inbound and outbound trip distribution percentages are the same during the AM and PM peak time periods. The difference in directional distribution between the AM and PM peak periods is reflected in the number of inbound and outbound trips forecast during each peak period, and is captured in the trip generation rather than the distribution.

The Project Opening Year 2017 AM and PM inbound trip distribution through the study area with 2012 Modified Project Option 1 is shown in Figure 6, and the outbound trip distribution is shown in Figure 7. The inbound trip distribution for Modified Project Option 2 is shown in Figure 8, and the outbound trip distribution is shown in Figure 9.

The Project Opening Year 2017 inbound and outbound trip distribution through project site access driveways is shown in Figure 10. In the opening year, the only access to the school site is provided from Irvine Boulevard, and the driveway distribution is the same for the 2011 Approved Project and 2012 Modified Project Options 1 and 2.

The inbound project trip distribution through the study area during the AM and PM peak time periods in the Year 2035 and Post-2035 with the 2011 Approved Project is shown in Figure 11, and the outbound trip distribution is shown in Figure 12. The Year 2035 and Post-2035 AM and PM inbound trip distribution through the study area with 2012 Modified Project Option 1 is shown in Figure 13, and the outbound trip distribution is shown in Figure 14. The inbound trip distribution for Modified Project Option 2 is shown in Figure 15, and the outbound trip distribution is shown in Figure 16.

The Year 2035 and Post-2035 inbound and outbound trip distribution through project site access driveways for the 2011 Approved Project scenario is shown in Figure 17, and the trip distribution through site access driveways for the 2012 Modified Project Options 1 and 2 are shown in Figure 18.

The Project Opening Year 2017 AM and PM peak hour project generated trips through the study area in the 2011 Approved Project scenario are shown in Figure 19. Figures 20 and 21 show the peak hour project generated trips for the 2012 Modified Project Options 1 and 2, respectively. The opening year AM and PM peak hour trips through site access driveways are shown in Figure 22.

The Year 2035 and Post-2035 AM and PM peak hour project generated trips through the study area in the 2011 Approved Project scenario are shown in Figure 23, and Figures 24 and 25 show the peak hour project generated trips for the 2012 Modified Project Options 1 and 2. The buildout AM and PM peak hour trips through site access driveways are shown in Figure 26.

Special Event Analysis

The Irvine Unified School District (the District) proposes to build a 2,940-seat athletic stadium as part of the High School No. 5 campus. The stadium would serve as a venue for special events such as graduation ceremonies and sports activities, and is not expected to generate a significant number of trips on a daily basis throughout the year. The proposed stadium would likely host one varsity football game per week for about ten to twelve weeks per year.

The proposed stadium is not expected to generate a significant number of trips during the AM peak hour, so the PM peak hour is the only time period selected for analysis. Any of the other High School No. 5 facilities (the performing arts center, tennis courts, softball/baseball fields, etc.) may be available for public or non-enrollment population use on a very limited basis during special events, and this activity would not contribute to peak hour trip generation.

Stadium Trip Generation

The stadium land use category is not currently listed in the Institute of Transportation Engineers (ITE) Trip Generation Manual, and there is limited local or national survey data available for this type of use. High school stadiums typically do not generate a significant number of vehicle trips during the peak hours of adjacent street traffic, but volumes may vary depending on the type of event and the scheduled start time. Stadium uses that would not attract large numbers of spectators are not expected to generate any additional trips. Vehicle trips generated by sports team practices and activities that take place on the track and football field are already captured in the standard trip generation for the high school. The only additional trips that are expected to be generated by the stadium would be for events with a significant volume of spectators seated in the bleachers.

High school stadium activities that attract large numbers of spectators tend to be seasonal, and include football games, graduation ceremonies, and occasional community events. Varsity football games are typically scheduled for Thursday, Friday, or Saturday evenings between late August and early December.

It is expected that the daily and peak hour trip generation for the proposed High School No. 5 will be similar to the trip generation at Irvine Stadium. Driveway counts were made at Irvine Stadium in an attempt to identify the number of vehicle trips that enter and exit the stadium site during a typical stadium event. Varsity football games with attendance at stadium capacity are forecast to generate a total of 605 evening peak hour trips (430 inbound and 175 outbound). This value is based on driveway volumes observed at Irvine Stadium and Institute of Transportation Engineers (ITE) *Trip Generation* rates for Heritage Park.

Evening peak hour trips are not expected to occur on typical weekdays. As a worst case scenario, the number of forecast project-related trips for a stadium event where every bleacher seat is filled is added to the weekday PM peak hour volumes for each intersection in the level of service analysis. This would be representative of a sold out varsity football game held on a Thursday night.

Average Daily Trips

The daily traffic volume for a stadium spectator event at High School No. 5 is forecast to be 2,176 trips, which includes 1,088 inbound trips and 1,088 outbound trips throughout the day. Daily trip generation for a special event land use like a high school stadium is highly variable, and depends on a number of local factors including demographics, weather patterns, team performance, and other site-specific criteria. The high school stadium is not one of the land use

Kerwin Lau – July 23, 2013

categories included in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, so two other sources were used to estimate the daily trip rate for the High School No. 5: 1) The San Diego Municipal Code Land Development Code Trip Generation Manual¹, and 2) the Estancia High School Stadium Traffic and Parking Impact Analysis².

The City of San Diego Traffic and Engineering Division recommended trip generation rate for a Sports Facility land use is 1 trip per attendee. A spectator sport facility is defined as a specially designed land use where people gather to watch a team sport or other attraction, such as the San Diego Qualcomm Stadium, the Sports Arena, or the Del Mar Race Track. This type of land use generally attracts more regional trips than a local high school football stadium, and would be expected to have a higher daily trip generation rate. The Newport-Mesa Unified School District proposed to build a stadium at Estancia High School in 2001. Estancia High is another local Orange County school located in the City of Costa Mesa. The Estancia High School Traffic and Parking Impact Analysis utilized a daily trip generation rate of 0.47 trips per seat, and forecast a total of 1,186 trips for a 2,523-seat stadium.

The daily trip generation rate of 0.74 trips per seat used for the High School No. 5 is based on an average of the City of San Diego Traffic and Engineering Division trip rate for a Sports Facility (1 trip per attendee) and the rate used for the Estancia High School stadium (0.47 trips per seat). This rate represents a conservative estimate for capacity events at High School No. 5.

The stadium trips would not be generated on typical weekdays throughout the year. Total driveway trips of 2,176 are only expected to occur on days when a varsity football game, graduation ceremony, or other special event that fills the stadium would occur. Varsity football games are scheduled for Friday evenings between late August and early December, and graduation ceremonies occur in the month of June. This traffic would have the characteristics of a special event, and would not contribute to the typical daily traffic volumes year round.

Stadium Trip Distribution

The stadium trip distribution for each analysis scenario has been developed based on the following assumptions:

- 68% of the trips generated for stadium events would originate within the High School No. 5 attendance area boundary, and follow a distribution similar to typical weekday traffic.
- 32% of the trips generated for stadium events would originate outside of the High School No. 5 attendance area boundary, with 3% coming from the east, 8% coming from the south, and 21% coming from the west. Trip distribution percentages on local arterials are proportional to 2011 daily traffic volumes published by the City of Irvine.

The inbound stadium trip distribution through the study area during the PM peak time period in the Project Opening Year 2017 is shown in Figure 27, and the outbound trip distribution is shown in Figure 28. The inbound and outbound stadium trip distribution in the vicinity of the project site is shown in Figure 29.

The inbound stadium trip distribution through the study area during the PM peak time period in the Year 2035 and Post-2035 for the 2011 Approved Project scenario is shown in Figure 30, and the outbound stadium trip distribution is shown in Figure 31. The Year 2035 and Post-2035
