School Safety Planning Principles
Collaborative Partnerships

- Effective school emergency management planning and development are not done in isolation. It is critical schools work with their district staff and community partners.¹

- Through closer coordination with educators, local law enforcement, fire departments, emergency medical services, public safety personnel, security experts and mental health professionals, schools can become much safer environments.²

- Every school should have a safety plan developed in partnership with public safety agencies.³

- School districts need to work together with stakeholders to implement identified priorities for individual campuses.⁴

#### Purpose

The Emergency/Safety Partnership (E/SPAR) is a collaborative forum to provide leadership in the five phases of emergency management; to share best practices; and to further refine the District’s Emergency Management Plans.
IUSD’s Collaboration Structure

- Emergency Preparedness Interagency Collaborative (EPIC)
  - Emergency/Safety Partnership
    - District Safety Committee

School Safety - What the Professionals Say

School Safety Planning Principles

Multi-Hazard Planning
School Safety Planning Principles
Multi-Hazard Planning

- When conducting a Needs (Safety) Assessment, schools are encouraged to focus on a holistic approach, that is to consider all possible hazards and identify the greatest risks and priorities.¹

- The planning process must take into account a wide range of possible threats and hazards that may impact the school and community.²

- Planning provides for the access and functional needs of the whole school community.²

- The plan should consider natural and manmade disasters.³

- A school’s plan should be tailored to address the unique circumstances and needs of the individual school, and should be coordinated and integrated with community plans.³

2018 Great California Shakeout

Thursday, October 18, 2018 at 10:18 AM

- Test Individual School Disaster (Earthquake) Readiness Plans
- Test Site Radios with the District’s Emergency Operations Center
- Test Site Radios with the County of Orange - Mutual Aid Channel
7.8 Magnitude Earthquake Along the San Andreas Fault

County Exercise Begins 48 Hours Post-Earthquake

- 1,190 patients admitted to local hospitals.
- 85% of local hospitals are seriously damaged.
- Major freeways are congested and/or shutdown.
- Power out in most areas of Orange County.
- Water out in large parts of Orange County.
- 500K tons of structural debris.
- 39,917 people displaced.
- 1,126 people are in shelters.

IUSD Objective:
To review the District Emergency Operations Center readiness and ability to evaluate damage to school property and to return to academic instruction as soon as practical.
Crime Prevention Through Environmental Design (CPTED)

CPTED applies to both new and existing schools and is built on three simple concepts: natural surveillance, territorial, and natural access control.

Safe school designs should create, not reduce the opportunity for staff and students to observe and be more aware of their surrounding beyond the traditional classroom environment.

Crime Prevention Through Environmental Design (CPTED)

- Natural Surveillance
- Territorial
- Natural Access Control
The physical ability to see what is going on in and around your school.

Solid walls, tall shrubs, parked cars, outbuildings, sculptures, large signs, and other obstacles can block natural surveillance.

Look for ways to increase visibility:
- Installing openings or windows in solid walls, to increase visual exposure.
- Blocking access to the hidden area entirely.
- Removing welcoming features, such as benches, that draw people into the hidden areas.
While glass walls and interior windows may pose a safety concern in the case of an armed intruder, the increased transparency improves everyday safety and supervision.

Fights, bullying and other issues all fall under the school safety umbrella, and these events are far more prevalent in schools.

Adding interior windows and glass walls increases supervision in classrooms and across common spaces, allowing teachers to oversee students working in groups outside of the traditional classroom setting and heightening students’ awareness that their actions are visible to more people throughout the building.

Doors used in educational facilities are commonly made of wood or aluminum with significant portions of glass.

These materials can easily be penetrated and provide only partial defense against an armed intruder.

Bullet-resistant doors are very expensive and should be used only where no other protections exist.

Few security measures can fully stop a determined intruder, but if security window film is properly installed, it can delay a perpetrator.

Given resources are scarce, the implementation of security measures should be prioritized.

Safer Schools – What Can We Do (2018). Published by the Orange County Grand Jury.

School Safety - What the Professionals Say

CPTED - Territorial

Measures that reinforce a message of ownership over the school.

The most straight-forward examples of territoriality are signs restricting access, directing visitors to the office, or posting campus closing times.

Defining clear borders is another step that reinforces territoriality. A low fence or hedge around the edge of the school property may not physically stop a trespasser, but helps identify where public space ends and school space begins.

CPTED (Territorial) – School Fencing

Fencing needs should be determined on a school-by-school basis.¹

➢ **Advantages:**
- Designating the school grounds as a well-defined, carefully maintained space.¹
- Enabling surveillance by school staff and law enforcement.¹
- Limiting access to areas that are not highly visible.¹
- Restricting entry and exit points to a few easily monitored areas.¹

➢ **Disadvantages:**
- Schools must not resemble fortresses. Schools cannot barricade against all possible harm and trying to do so is counterproductive to maintaining a healthy learning environment.³
- Tall, continual fencing can block student pathways, forcing students to take a longer route to school where they are exposed to traffic, crime, and hazards.¹
- In an emergency, continuous fencing could restrict rapid egress from the campus (from an internal threat).¹,²

1. School Fencing: Benefits and Disadvantages (2013). Hanover Research
2. Safer Schools – What Can We Do (2018). Published by the Orange County Grand Jury.
CPTED (Territorial) – School Fencing

What is the Desired Outcome?

- Though there have been a number of high-profile school shootings in the U.S. over the past several years, homicides at schools are rare.¹

- Security measures may not be fully effective, especially because the majority of attackers use their established relationship with the school, as students or staff, to gain legitimate entry into the school.²

- In a majority of high school and middle school incidents (between 2000 and 2013), the shooter was a student at the school; this was the case in 12 of 14 high school shootings and 5 of 6 middle school shootings. Incidents at elementary schools did not involve the actions of a student.³

- Between 2014 and 2015, three (3) school shootings occurred, 2 at a high school and 1 at a middle school. Each shooter was a student at the affected school.⁴

A Brief Look at Violent School Intruders

- In 93% of incidents of targeted school violence, the student engaged in behavior prior to the attack that elicited concern.¹

- For student perpetrators (under age 18), school peers and teachers were more likely to observe concerning behaviors than family members.²

- Prior to most incidents, people know about the attacker’s idea and/or plan to attack.³

- However, in cases where the perpetrator displayed a variety of concerning behaviors, the observer(s) of that information did not necessarily pass it along to anyone else.²

- This suggests that at least some aspects of targeted school violence can be prevented with proper reporting, assessment, and information sharing procedures in place.¹

---

CPTED - Natural Access Control (Facility Hardening)

- The ability to decide who gets in and out of your school.
- Many schools have buildings, breezeways, unlocked doors, and open windows that access is essentially unrestricted, despite any rules to the contrary.
- Re-configuring as many entry doors as possible so that they automatically lock when closed and only serve as emergency exits.

IUSD Safety and Security Investments:
- Electronic Access Control
- Camera (Surveillance) System

Plaza Vista School
Purpose of the Study

- To assess how well Orange County public schools are controlling access to campuses during school hours.

- To provide school districts, boards, principals, and parents with information to improve preparation for violent school events.

- To stimulate a county-wide discussion identifying underutilized resources and to share problem-solving strategies.

- To develop recommendations which can help school districts ensure schools implement their safe school programs.
Topics Addressed in the Study

- Cameras (Surveillance) Systems*
- Locks, Keys, and Smart Cards*
- Emergency Radio Communications*
- School Threat Assessment (Audit) Tools*
- Visitor Management Systems*
- School Visitor Policies and Procedures*
- Emergency Communication Apps*
- Physical Barriers (fencing – landscaping)*
- Staff and Student Identification Badges*
- Windows*
- Controlling School Access*
- Metal Detectors

* = Topic Addressed in the Safety Study Session
Conclusions

- School safety is a priority in all Orange County school districts.
- School districts need to work together with stakeholders to implement identified priorities for individual campuses.
- There are many identified safety measures discussed in the report that can be accomplished with little or no funding.
- Higher-priced items can be prioritized as funding permits.
Summary of Findings and Recommendations

- Many Orange County school campuses were constructed to reflect an “open and inviting” atmosphere. Recommendation to outline a plan for respective boards to make campuses more secure.

- Few schools in the county have used an individual school security assessment to identify deficiencies or to develop the required plan. Recommendation for schools to perform school security assessments.

- Many Orange County schools do not require staff and students to wear ID badges. Recommendation to consider using ID badges for all staff and secondary students.

- School districts should explore all possible funding resources that may be available in order to implement desired security measures.
IUSD’s Safety and Security Investments

As Presented in the Orange County Grand Jury Report
Immediate video assessment may give the staff the ability to notify law enforcement of an emergency and identify the exact location of the threat.
